# Industry/MMS DMWG Original Guidance

Workgroup for personnel with data management or regulatory functions

Hosted by various participants

Meet three to four times annually in New Orleans or Houston

Majors, independents, consultants, vendor, and service company participation

# MMS Data Management Goals

Obtain and maintain quality information for GOM mineral resource management and for the stakeholders (lessees, operators, etc.)  
Data and documents meet or exceed requirements for completeness, correctness, accuracy, timeliness, accessibility, integrity, etc.

# RECENT NTLs

## Data Management

2006-G16 Well Records Submittal/  
Elimination of Paper

2006-G16 Addendum No. 1

2006-G18 Wells (holes-in-the-  
ground) Data Cleanup

# NTL 2006-G18

October 31, 2006

OMB Control Number 1010-0137  
OMB Approval Expires: October 31, 2009

**UNITED STATES DEPARTMENT OF THE INTERIOR  
MINERALS MANAGEMENT SERVICE  
GULF OF MEXICO OCS REGION**

NTL 2006-G18

**NOTICE TO LESSEES AND OPERATORS (NTL) OF FEDERAL OIL AND  
GAS LEASES IN THE OUTER CONTINENTAL SHELF (OCS),  
GULF OF MEXICO OCS REGION (GOMR)**

**Wells (holes-in-the-ground) Without Assigned MMS API Numbers**

This NTL supersedes NTL 98-29 and associated addendums to continue the task of cleaning up our historical data for wells in the GOMR. In doing so, every effort has been made to minimize the burden on industry in accomplishing this goal.

The primary objective of Historical Well Data Cleanup (HWDC) is to obtain missing data for wellbores that have not been assigned API numbers by the MMS. We are looking for any records that would have been submitted to MMS. These range from very straightforward to extremely complex, depending on the types of problems encountered during drilling operations. Having complete and accurate documentation of all drilling activities is the goal, and operator cooperation is an essential part of locating missing information for the cleanup of data from these wells.
