SCAN UPDATE
SEGMENT 18177
ROW OCS-G29042

In Reply Refer To: GE 1035A

April 13, 2012

Ms. Vanessa Villagran
Noble Energy, Inc.
100 Glenborough Dr., Suite 100
Houston, Texas 77067-3299

Dear Ms. Villagran:

This office has reviewed your completion report for the following pipeline:

Application Type: New Right-of-Way Pipeline
Letter Date: November 10, 2011

Segment Number	ROW Number	Size (inches)	Length (feet)	Service	From	To
18177	G29042	04-05	145035	Bulk Oil	West Plet Mississippi Canyon Block 292	Platform A Viosca Knoll Block 900

The total length of the "as-built" right-of-way is 27.47 miles.

The report is submitted in accordance with 30 CFR 250.1008 (b).

The data provided in the report establishes the assigned maximum allowable operating pressure (MAOP) for the pipeline:

MAOP (psig)	MAOP Determination
8399	Hydrostatic Test Pressure

The high and low-pressure sensors shall be set no higher than 15 percent above and below the normal operating range, respectively. The high pilot, however, shall not be set higher than the MAOP of the pipeline. The pressure range shall be established by the use of pressure recorders.

The right-of-way No. OCS-G29042 is described as follows:

A 200-foot wide right-of-way to operate and maintain a 4-1/2-inch bidirectional pipeline, 27.47 miles in length, to transport bulk oil from a West Pipeline End Terminal (West PLET) in Block 292 through Blocks 248, 204, 203, 159, 115, 71, 27, and 26 located in Mississippi Canyon Area and through Blocks 988 and 944 to Platform A in Block 900 located in Viosca Knoll Area.

Sincerely,

BIMAL SHRESTHA

Michael J. Saucier
Regional Supervisor

Re: Pipeline As-Built Drawings
Raton South Field Development Project
Mississippi Canyon 292
OCS Federal Waters, Gulf of Mexico, Offshore, Louisiana

Dear Mr. Alvarado:

Per the approved letters for segments 18176, 18177, 18178, 18179, 18182, Noble Energy Inc. is submitting the as-built pipeline plats for the Mississippi Canyon 292, OCS Federal Waters, Gulf of Mexico, Offshore Louisiana. Also enclosed are the pipelines hydrostatic test forms, charts and calibrations certificates.

If you should need anything further, please advise.

Sincerely,

Noble Energy Inc.

Vanessa Villagran
Regulatory Analyst

TABLE OF CONTENTS

1.0 GENERAL

Weatherford Pipeline and Specialty Services, hereinafter referred to as "WPSS", has been requested by Helix Energy Solutions Group, hereinafter referred to as "Helix", to perform pre-commissioning flooding of the crude oil field tieback to the existing Chevron production facility. The tie back consists of twin 4.5-inch O.D, 27.5 mile long flowlines terminating by means of Pipeline End Termination structures (PLETs) near the Raton South wellhead. The tie-in at the Raton South well will be achieved by installing a diverless vertically installed connection jumper. WPSS will flood each flowline individually prior to welding on the PLETs and overboarding. This scope of work will take place on the deck of the Helix Express Vessel.

WPSS will flood from a port on the pull in head. The flooding medium will be filtered seawater, treated with 600ppm of XC102 and 110pmm of OSW490. The Helix Express will supply the seawater from their saltwater lift pumps on board the Helix Express. Following the Flooding the WPSS equipment will be demobilized and the WPSS personnel will transfer to the Chevron platform VK-900 for the Hydrotest Operations.

SYSTEM	LENGTH [FT]	OD [IN]	WT [IN]	ID [IN]	WD (MAX.) [FT]	VOLUME [GALS]
EAST FLOWLINE	145,309	4.500"	0.531	3.438	3,400	70,075
WEST FLOWLINE	145,378	4.500"	0.531	3.438	3,400	70,108
NOTE:	Flowline Pipe Specification		API 5L x70 SMLS Line Pipe. w/ 14 – 16 MILS FBE Coating			

1.1 OBJECTIVE

The objective of this document is to provide all personnel a clear understanding of the work scope to ensure the work is completed in a safe, efficient and timely manner. Furthermore it is designed to be an inclusive source of information regarding the activities associated with the flooding operation to be performed on Noble Raton South Development Project, from the Helix Express.

Each Operational Procedure has an ITP. In the ITP involvement codes and definitions are used as follows:

"P" - Performance

The Organization involved is responsible for the physical performance of the Inspection Check or Task and for issuing the relevant Quality Record (definition of Record as per ISO 9000:2000 Quality Management Systems – Fundamentals and Vocabulary, para 3.7.6).

"W" - Witness

The Organization involved elects to attend to the Inspection or Check performed by the Performing Organization. The Performing Organization shall notify the Witnessing Organization of the Inspection or Check performance within 24 hours of activity being preformed. Non-attendance of the Witnessing Organization at the notified time shall under no circumstances delay the Inspection or Check being carried out by the Performing Organization.

"H" - Validation (Hold Point)

The Organization involved attends the Inspection or Check performed by the Performing Organization to record the Inspection or Check results. The Performing Organization shall notify the Validation Organization of the Inspection or Check performance within 24 hours of activity being preformed and shall carry out the Inspection or Check only if the Validation Organization is attending. A written waiver from the Validation Organization is required before execution of the Inspection or Check can take place in their absence.

"R" - Review

The Organization involved is responsible for the performance of a review of relevant documentation and/or Quality Records.

"M" - Monitor

The Organization indicated may monitor the works during routine surveillance.

1.4 RESOURCES

Helix shall provide the following services to support the activities as outlined herein:

- Marine transportation for WPSS equipment and personnel
- Helicopter Transportation (if applicable)
- Meals and lodging for four (4) WPSS personnel onboard the Helix Express
- Crane services at dock and offshore facilities to transfer WPSS equipment and personnel
- Utility air supply for WPSS equipment onboard the Helix Express (185cfm @ 100psi)
- Water supply for WPSS equipment onboard the Helix Express (min 120gpm @ 30psi)
- Electrical supply for WPSS equipment onboard the Helix Express (110v, 15amp)
- Offshore Rigging support as needed

2.0 SAFETY

2.1 SUMMARY

WPSS is fully committed to providing a quality H.S.E. performance in all facets of its operations, at all locations and on all projects in which WPSS is involved. It is a requirement for all work procedures that pre-job safety analysis or JSAs be performed and that all pertinent information be distributed and discussed with all personnel involved prior to start of work. Furthermore, safety meetings shall be held prior to every shift to distribute current information and discuss hazards and safe procedures of the job at hand. WPSS personnel must wear proper PPE on the job; hard hat, safety shoes and safety glasses and other PPE as stipulated by the offshore vessel/platform.

2.2 SAFETY MEETINGS & JOB SAFETY ANALYSIS

Upon arrival at the work location, a site specific safety meeting will be held to review all aspects of safety relating to the work and location. All relevant personnel will be required to attend. This meeting will be recorded by WPSS.

A Job Safety Analysis (JSA) will be conducted before commencing each new operation and at the beginning of each work shift. The JSAs shall outline tasks to be performed and identify the associated risks for each task along with mitigating procedures to minimize the anticipated risk exposure. All work crewmembers shall participate in the JSA process to ensure everyone understands the risk and mitigating procedures. The JSAs shall also review the means of egress at the specific location.

The JSAs shall include all hazards, control measures, emergency response, fire prevention, safe areas, escape routes, muster points, use of signs and barriers, PPE, handling of hazardous material, awareness of high pressure, noise, First Aid facilities and accident and incident reporting.

Any accidents or incidents, including near misses, will require a total **"ALL STOP"** with a post review of the situation before any activity can resume. With regards to an unsafe act or situation, any personnel involved in operations can give an **"ALL STOP"** but only the WPSS Superintendent in conjunction with the Company Representative and Operations can give an **"ALL START"**.

NOTE:

At any point in time during the WPSS operations, an individual has the right to **"STOP THE JOB"** if there are "unsafe" activities or situations occurring.

2.3 PERMIT TO WORK

WPSS personnel are to ensure that a permit to work is issued by Offshore Vessel / Client on all offshore facilities / vessels thus ensuring that all parties under WPSS control are in full compliance with the facilities operating practices.

2.4 High Pressure Systems Precautions (Air, chemical or Water)

When operating in the vicinity of hoses, equipment, or piping under pressure, all personnel must adhere to the following precautions:

- During pressurization and hold period, a **minimum 15 foot** stand-off distance shall be maintained from test flange/head and a **minimum 10 foot** stand-off distance from pressurized piping. In the case of limited space due to SIMOPS, the client will assist WPSS crew in allocating stand-off distances during the Flooding operations.
- Placement of the test flange/head should take into consideration the ballistic flight path if failures were to occur on the autoclave port fitting and separation from the blind flanges was to occur.
- No work is to be conducted on the pressurized system. In the event that a leak is found, the system must be de-pressurized to ambient pressure or "double-block" isolation must be used before any work can be conducted on the system.
- A suitable area around test spread shall be taped off (red danger tape) to prevent unauthorized entry to area's near the test head.
- Prior to pressurization, the location and test activity shall be announced over the intercom/loud-speaker system.
- A suitable means shall be put in place to provide visual leak detection without having to approach the test flange/head during pressurization or hold period to accomplish the visual verification.
- Whip checks will be utilized to secure all hoses no matter the level of pressure; this will include all "standard" whip checks and/or rope for larger hoses when no "standard" whip checks exist.
- Before beginning work on any operation, the WPSS Crew on site will conduct a walk-through to check each piece of equipment and ensure it is correctly installed and secured with whip checks.

2.5 Equipment Transfer

Prior to mobilization the following will be confirmed for each item of WPSS equipment to be lifted:

- All equipment will be designed to adhere to standards for offshore transit/transfer and operations.
- All equipment will be clearly marked on the lifting frame with its weight.
- Equipment slings, shackles, stingers, etc. will be certified within the last 6 months and certification shall accompany the equipment.

WPSS personnel will adhere to the following precautions when operating in the vicinity of items being lifted overhead:

- Proper PPE will be worn by all individuals.
- Only one individual will provide hand-signals to the crane/forklift operator.
- WPSS personnel will clearly define a plan prior to beginning the lift, and will execute the plan as it was designed.

2.6 Environmental Safety

The following project specific precautions will be put in place to avoid any undue damage to the environment:

- To prevent spillage of fuel during pump to tank transfers, these operations will be performed over drip-pans or pads at all times.
- Water Disposal methods will be in place to remove the water brought onto the facilities and will be disposed of in a manner in accordance with regulations

2.7 Equipment Certification

All WPSS stand alone equipment (containers, pumps, compressors, tanks and hose baskets) shall be supplied with suitable rigging for offshore lifting and designed in accordance with Weatherford installation basis of design and shall include valid certification (certified lifting points and lifting gear). All mechanical instrumentation and electrical gear shall be calibrated by authorized Third party no sooner than 1 month of mobilization of the spread with 6 months validity certificates from time of delivery or testing.

3.0 Equipment, Personnel & Materials Required

3.1 WPSS Flooding Equipment

Item	Description	Qty	Dimensions (L x W x H) [ft]	Weight [lbs]
1.	Diesel driven positive displacement pump	2	4 x 4 x 5	2,200
2.	Chemical Injection pump	2	3 x 5 x 4	1,200
3.	50 micron Filter Skid	1	2 x 2 x 4	200
4.	Job Box	1	5 x 4 x 4	1,500
5.	50 bbl Tank	3	4 x 4 x 6	1,500
6.	Storage Container	1	10 x 8 x 8	9,800
7.	1" Diaphragm Pump	1	Stored Inside: Hose Basket *Job Box* Storage Container	
8.	2" Fill Hose	Set		
9.	1" Air Hose	250'		
10.	¼" Injection Hose	Set		
11.	2" Flow Meter	2		
12.	Pressure Relief Valve set to 1500psi	2		
13.	Keller Digital Gauge (pressure & temperature) 300bar	2		
14.	Hand Tools / Valves / Fittings	1 set each		
15.	Handheld Radio	1 set		
16.	Computer and printer package	1		

3.2 WPSS Personnel

Item	Description	Qty
1.	Supervisor	1
2.	Foreman	1
3.	Technician	2

3.3 WPSS Chemical Requirements

Item	Description	Qty
1.	Baker Hughes Biocide XC102 (600ppm) + 20% contingency	100 gallons total
2.	Baker Hughes Oxygen Scavenger (110ppm) + 20% contingency	19 gallons total

3.4 WPSS Offshore Requirements

Item	Description	Qty
1.	Seawater Supply	140,590 gals
2.	Utility Air	185cfm / 100psi
3.	Diesel Fuel	As needed
4.	Crane Access	As needed

3.5 Helix Provisions

Item	Description	Qty
1.	Tie in port on pull in head for flooding spread	1

4.0 Operational Procedures

4.1 Equipment and Personnel Mobilization

Once confirmation to mobilize has been received from Helix, WPSS equipment and personnel will be transferred to the Client Specified Dockyard Location from transit to the offshore location. Lift transfers for equipment and personnel will be conducted by the Helix personnel. Staging of the equipment will be carried out by Helix personnel with the assistance of WPSS personnel. All personnel working under WPSS will undergo the vessel orientation before any work can commence.

Item	Description	Reference	WPSS Initial/ Date	Helix Initial/ Date
1.	Prior to mobilization of equipment and personnel, the WPSS crew will stage equipment and review the following: • Pre-Test of manifolds/hoses per workshop procedure • Start-up and run of pumps • Check certification of hoses, lifting slings, shackles, lifting point, etc. • Check Keller Gauge for operating pressure: 300bar (4350psi)	WPSS-14550-MAN-01	P	W
2.	Prior to performing any work, WPSS Supervisor will conduct JSA Ensure all relevant parties have read and signed JSA	3-4-GL-GL-PSS-00004	P	W
3.	Load out equipment for Helix Noble Raton South Flooding operations on board the Helix Express.		P	W
4.	Mobilize equipment and personnel to: Company Dockyard Address (TBD)	5-4-GL-GL-PSS-00006	P	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE
5.	Upon arrival at the COMPANY DOCKYARD ADDRESS, WPSS personnel to supervise the offloading of WPSS equipment from *transportation*	5-4-GL-GL-PSS-00006	P	P
6.	*Confirm all items are properly secured for transit to site*		P	P
7.	*Upon arrival WPSS employees will immediately check-in with* Vessel Safety Officer and receive safety orientation prior to commencing any work activities	5-4-GL-GL-PSS-00006	P	W
8.	The WPSS Supervisor shall conduct a Site Safety Meeting, JSA and job brief with crew and all relevant personnel before any operation has commenced to review all aspects of safety relating to the location with relevant personnel. Helix, Company, and/or vessel representatives shall attend and provide site safety information. *The meeting will be recorded by WPSS on a Site Safety Form.*	3-4-GL-GL-PSS-00004 7-4-GL-GL-PSS-00003	P	W
9.	Vessel personnel to lift equipment to Vessel and spot into the planned position according to predetermined lifting plan. WPSS to review and oversee placement of equipment.	5-4-GL-GL-PSS-00006	W	P
10.	Await Helix representative's instructions to proceed with rig-up activities. Changes to be authorized by WPSS Supervisor and reviewed by Helix representative.	5-4-GL-GL-PSS-00006	P	W

4.2 Flooding Equipment Rig-up

Item	Description	Reference	WPSS Initial/ Date	Helix Initial/ Date	Client Initial/ Date
1.	Confirm all equipment is functional and complete daily maintenance and fuel checks.	5-4-GL-GL-PSS-00006	P	W	W
2.	Obtain Permit to Work for rig up and function testing and commence positioning of the equipment as per General Arrangement drawings. Conduct JSA/Tool Box Talk.	3-4-GL-GL-PSS-00004	P	P	W
3.	Lift the Flooding pumps and equipment to stage in the planned position if not already done during mobilization of equipment.	5-4-GL-GL-PSS-00006	P	P	W
4.	Connect the supply hose from the water source to the inlet of the 50 micron filter and tank manifold. Note: The Express confirm Fire water system can supply minimum 120gpm.	5-4-GL-GL-PSS-00006	P	W	W
5.	Connect the 2" flooding hose from the flooding pump to the flow meter / double block and bleed assembly. Install the heavy-duty whip checks to all connections and fully tighten.	5-4-GL-GL-PSS-00006	P	W	W
6.	Connect Supply hose from Chemical Storage tanks to Chemical Injection Pumps. Install the heavy-duty whip checks to all connections and fully tighten.	5-4-GL-GL-PSS-00006	P	W	W
7.	Prior to proceeding it will be necessary calibrate the chemical injection pumps to determine volume per stroke for chemical injection purposes.	5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
8.	*To perform confirmation on the output per stroke on each pump, conduct the following calibration test:* 1. *Ensure stroke counter on pump is "zeroed"* 2. *Flow water through system until a steady stream of water is flowing from the discharge hose* 3. *Place discharge hose in 5gal bucket and engage pump* 4. *Record the number of strokes required to fill 5gal bucket* 5. *Repeat 3 times to ensure accuracy* $Volume\ per\ stroke = {}^{5gal}/_{Number\ of\ strokes}$ Average volume per stroke				
9.	Calculate strokes per minute using volume per stroke above. $Strokes/Min = \frac{Flowrate\ x\ ppm}{1{,}000{,}000\ x\ volume\ per\ stroke}$ Strokes / Minute	5-4-GL-GL-PSS-00006	P	W	W
10.	After calibration connect the Chemical injection hose from the Chemical injection pump to the double block and bleed assembly. Install the heavy-duty whip checks to all connections and fully tighten.	5-4-GL-GL-PSS-00006	P	W	W
11.	Upon completion of previous steps WPSS will wait until first pipeline end is recovered to surface for PLET installation and given instruction to proceed.	5-4-GL-GL-PSS-00006	M	M	M
12.	Upon confirmation to proceed; The Helix representative shall review and sign the Commencement Report prior to the start of any operations associated with the tying in to pull in head and flooding operations. Note: Helix will provide a 2" Female NPT tap for tie in	5-4-GL-GL-PSS-00006 5-4-GL-GL-PSS-00011	P	P	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
13.	WPSS will then Install tie in manifold to pull in head. Note: Helix may need to provide rigger support and/or scaffolding to support tie in manifold on PLET porch.	5-4-GL-GL-PSS-00006	P	W	W
14.	Install 1" "bleed" hose from the tie in manifold and route to the 50 bbl Tanks for discharge. Note: Bleed water may contain chemical for disposal by Helix.	5-4-GL-GL-PSS-00006	P	W	W
15.	Connect the 2" flooding hose from the double block and bleed assembly to the tie in manifold on pull in head. Install the heavy-duty whip checks to all connections and fully tighten.	5-4-GL-GL-PSS-00006	P	W	W
16.	With all equipment in place the Subcontractor Project Engineer, and relevant personnel and walk through the flooding spread and will carry out a Safety walk-through of rig-up.	5-4-GL-GL-PSS-00006	P	H	H
17.	Upon confirmation of safety walk-through, WSPP will erect safety barriers and place safety warning signs and check functionality of WPSS flooding spread	5-4-GL-GL-PSS-00006	P	W	W
18.	Platform personnel will ensure that top of riser flange is properly vented to allow displaced air to escape. Note: If delays are expected, the top of riser blind flange will be secured and tightened to prevent any entry of foreign debris.	5-4-GL-GL-PSS-00006	P	P	W
19.	Personnel on VK-900 platform will ensure immediate area around risers is barricaded, and all relevant personnel are aware of the commencement of Flooding operations.	5-4-GL-GL-PSS-00006	P	P	W

4.3 FLOODING OPERATIONS

NOTE: The following procedure will be done for each flowline prior to over boarding of the PLET(s).

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
1.	The WPSS Supervisor shall conduct a JSA/Toolbox Talk at the beginning of the operation with all personnel who will be operating, observing or witnessing for the duration of the operation. This JSA/Toolbox Talk will be reviewed at shift handovers for the duration of the operation. Any new or changing hazards identified and updated as required.	3-4-GL-GL-PSS-00004	P	W	W
2.	During the flooding operation, the following parameters will be recorded and logged every 10 minutes: • Pipeline Pressure.....psig • Flooding Rate.....gpm • Volume of water injected.....gallons • Volume of chemical injected.....strokes **NOTE: Chemical Concentration is 600ppm XC102 and 110ppm OSW490**	5-4-GL-GL-PSS-00012 Appendix E			
3.	Confirm water supply to flooding pump.	5-4-GL-GL-PSS-00006	P	W	W
4.	Begin filling 50 bbl tanks with filtered seawater.	5-4-GL-GL-PSS-00006			
5.	By regulating Chemical injection pump ensure that each 50 bbl tank is dosed with approximately 0.231 gallons of OSW 490 to achieve 110 ppm.	5-4-GL-GL-PSS-00006 Appendix E			
6.	Confirm good communication with personnel on VK-900 platform. Confirm top of riser flange is open to allow air to escape.	5-4-GL-GL-PSS-00006			

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
7.	Walk the line and verify WPSS valves aligned to flood	5-4-GL-GL-PSS-00006	P	W	W
8.	Once tanks have settled for at least 4 minutes. Start flooding pump and begin filling pipeline with chemically treated seawater Total Volume to be pumped per flowline is: **70,295 gallons + 1% = 71,000gals**	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
9.	Upon starting flooding pump, commence chemical injection XC 102 at rate noted below (from Item 4.2.10) to achieve 600ppm. Strokes per Minute |	5-4-GL-GL-PSS-00012 Appendix E	P	W	W
10.	During flooding operations the tanks will be rotated out to allow filling with chemically treated seawater, settling for at least 4 minutes per tank, and injection into the pipeline. Note: Each tank will be allowed at least 4 minutes settling time prior to injection into pipeline.	Appendix E			
11.	During flooding operations WPSS will monitor the flooding pressure on the line. It is expected that once flooding has begun the bottom "U" shape of the line will fill with water and air pressure trapped between the "U" and the injection point will increase throughout the Flooding process. As the pressure increases and as the pipeline becomes full, WPSS will stop pumping and "bleed" the air in the line through the 1" bleed valve on the tie in manifold. The bleed hose will be diverted to a 50bbl tank to capture the chemically treated water.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
12.	Upon reaching a steady state of flow adjust the rate to no less than 120 GPM, as not to exceed 1500 psig on the pump discharge.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
13.	Continue the pumping of water followed by the "bleeding" of air	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
	until the total volume is achieved.				
14.	Upon reaching **71,000gals,** Stop the flooding pump and chemical injection pump.	S-4-GL-GL-PSS-00012 S-4-GL-GL-PSS-00006	P	W	W
15.	Disconnect tie in manifold from pull in head and secure WPSS equipment until the second line is ready. Helix will now install the PLET to the pipe and recover next flowline section.	S-4-GL-GL-PSS-00006	P	W	W
16.	Once second line is recovered and placed in PLET porch WPSS will repeat the previous steps to complete flooding operations.	S-4-GL-GL-PSS-00006	P	W	W
17.	Upon completion of flooding both flowlines the Helix representative shall review and sign the Completion Report at the conclusion of all operations associated with flooding operations.	S-4-GL-GL-PSS-00013 S-4-GL-GL-PSS-00006	P	H	H
18.	*Remaining chemically treated seawater will be neutralized by* mixing at a 1:1 ration of XC102 and OSW490 with a contact time of at least 30 seconds. The neutralized seawater will then be overboarded	Appendix E	P	W	H

4.4 Equipment Demobilization

Item	Description	Reference	WPSS Initial/ Date	HELIX Initial/ Date	CLIENT. Initial/ Date
1.	Await Helix representative's approval to begin demobilization of equipment. Personnel will then be transferred to the Chevron Platform for Hydrotest operations.	5-4-GL-GL-PSS-00006	P	P	W
2.	Ensure all paperwork has been signed by Helix representative and / or relevant parties. • Commencement Reports • Daily Site Reports • Shift Handover Forms • Field Tickets • Pumping Reports • Job Safety Analysis (JSA's) • Post Job Evaluation • All Related Pressure Charts • All Related Temperature Charts • Completion Reports	5-4-GL-GL-PSS-00011 5-4-GL-GL-PSS-00006 5-4-GL-GL-PSS-00007 5-4-GL-GL-PSS-00012 3-4-GL-GL-PSS-00004 6-4-US-GL-PSS-00001 5-4-GL-GL-PSS-00013 5-4-GL-GL-PSS-00008	P	W	W
3.	The WPSS Supervisor shall conduct a JSA/Toolbox Talk at the beginning of the operation with all personnel who will be operating, observing or witnessing for the duration of the operation.	3-4-GL-GL-PSS-00004	P	W	W
4.	Break-down equipment spreads and prepare/secure delicate items prior to load-out.	5-4-GL-GL-PSS-00006	P	W	W
5.	Load-out equipment spread on WPSS supplied transportation. Ensure equipment is properly secured.	5-4-GL-GL-PSS-00006	P	W	W
6.	Demobilize equipment and personnel to the WPSS facilities at the following addresses: **Attn: Taylor Williams** **Phone: (713) 580-9700** **7721 Pinemont Road** **Houston, TX 77040-6203** **USA**	5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
7.	Contact Project Manager or Asset Coordinator to coordinate trucks for equipment and crew to shop. Maintain shipping manifests or other records for Project Manager.	5-4-GL-GL-PSS-00006	P	W	W
8.	Deliver Project Completion Book to Helix at time of final invoice.	WPSS-014550-CB	P	W	W

TITLE: **JOB SAFETY ANALYSIS**

Pre-Job Risk Assessment

Standard Hazards		Hazards Requiring Permits to Work		Hand Protection	
Exposure to Cold/ Heat Extremes	☐	Will a Lock-Out/Tag-Out of Equipment Occur?	☐	Leather Gloves	☐
Presence of or Traveling on Ice, Snow, Water	☐	Will a Confined Space Entry Occur?	☐	Cotton Gloves	☐
Slip/Trip/Fall Hazards	☐	Will Welding, Cutting, or Brazing Occur?	☐	Chemical Resistant Gloves	☐
Pinch Points Present	☐	**Ergonomic Hazards**		Welding Gloves	☐
Poor Lighting	☐	Awkward Position or Balance Will Be Necessary	☐	Vibration Reduction Gloves	☐
Presence of Insects or Wildlife	☐	Poor Posture Will Be Necessary	☐	Insulated Gloves	☐
Wind Conditions	☐	Straining, Lifting, Pushing or Pulling Will Be Necessary	☐	Other	☐
Inclement Weather	☐	Reaching or Climbing Will Be Necessary	☐	**Hearing Protection**	
Physical Hazards		Bending or Twisting Will Be Necessary	☐	Ear Plugs	☐
Pressurized Equipment Hazard	☐	Repetitive Motion Will Be Necessary	☐	Canal Caps	☐
Fire or Explosion Hazard	☐	**Chemical and Material Hazards**		Ear Muffs	☐
Electrical Hazard	☐	Oxygen Content Hazards	☐	**Respiratory Protection**	
Use of Hand Tools or Power Tools	☐	Asbestos Hazards	☐	Air Purifying Respirator	☐
Radiant Energy Hazard (i.e. Welding, Lasers, X-Ray.)	☐	Airborne Dust Hazards	☐	SCBA or Airline Respirator	☐
Flying Debris (Blown or Thrown Particles)	☐	Airborne Toxic Vapour, Fumes or Gas Hazard	☐	Escape Pack	☐
Working at Heights	☐	Absorption of a Chemical Possible	☐	**Special Items**	
High Noise Levels (85dba or greater)	☐	Caustic or Acidic Chemicals	☐	Deluge Station	☐
Lifting Equipment (i.e. Crane, Forklift, Man-lift)	☐	Reactive Chemical Hazard	☐	Active Fall Arrest System	☐
Lifting Equip. (Work on Uneven/Unstable Surfaces)	☐	H2S, CO2 or Natural Gas Hazard	☐	Retrieval System	☐
Access/Egress Hazards or Limitations	☐	**Over Head Protection**		Atmospheric Monitors	☐
Work Practice Hazards		Hard Hat	☐	Cotton or Fire Retardant Clothing	☐
Training Deficiency (Technical and/or HSE)	☐	Safe Zone	☐	Chemical Resistant Clothing (Apron, Cloves, Boots, Etc.)	☐
SSE/SPE Present	☐	**Foot Protection (ANSI Approved)**		Fire Extinguisher	☐
Culture and/or Communication Deficiency	☐	Steel Toe Shoes or Boots	☐	First Aid Kit	☐
Testing and Inspection Hazards	☐	Chemical Resistant Boots	☐		
Performance of a Non-Routine Task Will Occur	☐	Slip, Heat or Puncture Resistant Soles	☐		
Shift Changes Will Occur During Operations	☐	Other	☐		
Policy Variance Will Occur	☐

Raton South Hydrotest Recommendation

Introduction:

Before a new or rehabilitated pipeline is placed into service, it must be tested for integrity at a pressure above its designed working pressure. This is usually done with water, which may remain in the system for an extended period of time.

Water used in hydrostatic testing usually comes from one of several sources: aquifers, rivers, ponds, seas, etc. The use of water from any of these sources can cause corrosion and introduce bacteria into the pipeline. The severity of the problem is dependent upon the type and quality of water used, the length of time the water remains in the line, and the ambient temperature,

While the line is filled with water it is subjected to three types of corrosion:

1. Direct reaction of dissolved oxygen with the steel pipe to form ferric oxide/ hydroxide. Pitting may be initiated. This mechanism is not generally serious because the concentration of dissolved oxygen in the water is rapidly depleted due to the reaction with the pipe wall, Our tests indicate that corrosion due to oxygen content, even with air-saturated waters, is usually minimal in a closed steel pipeline and problems rarely result from this mechanism,
2. Localized pitting and corrosion resulting from the growth of sulfate reducing bacteria (SRB) and acid producing bacteria (APB).
3. Attack by hydrogen sulfide produced as a result of SRB growth.

Mechanisms 2 and 3, which involve bacterial growth, are the most serious concerns in hydrotest waters. Sea water and high TDS brines have a greater potential for corrosion than fresh water due to their higher conductivity and sulfate levels,

Conventional wisdom has it that to protect against corrosion during hydrostatic testing, you must add three types of chemicals to the water: on oxygen scavenger, a biocide and a corrosion inhibitor. For large or long pipelines, this can be exceedingly expensive.

BHI research data indicates that much of this expense is not necessary, In a closed system, oxygen is exhausted long before pitting due to oxygen becomes a problem. Controlling bacterial growth is generally sufficient to protect a pipeline from hydrotest damage. This can be accomplished by adding a biocide to the water prior to introducing it into the pipeline.

Baker Petrolite

Recommendation:

Recommendations were based upon the following information:

Water Source: Sea water
Water Quality: Sea water
Expected min. Temp: 40 F
Expected max. Temp: 72 F
Expected ph of water: Sea Water
West Flowline Length: approx. 145402 ft (includes riser length)
East Flowline Length: approx 145335 ft (includes riser length)
Flowline diameter (ID): 3.438 inches
PLET Piping diameter (ID): 4.063 inches
Pigging Jumper diameter (ID): 4.063 inches
Well Jumper diameter (ID): 4.987 inches
Expected shut in duration: 30 to 60 days **(recommendation based on 90 day max)**
Volume of Water: approx. 3343 bbls
Expected min. pressure: 10,313 psi
Expected max. pressure: not to exceed 10, 413 psi
Disposal method: Overboard

Biocide: 600 ppm (88.2 gallons) of XC102 is recommended for these hydrostatic test waters. This assumes a shut-in period not to exceed 90 days and a pH not to exceed 8. The recommended minimum and allowable concentration of active glutaraldehyde at disposal will be 50 ppm (see EPA Discharge Attachment).

Oxygen Scavenger: 11 ppm OSW490 for each ppm of oxygen is recommended for removal of the dissolved oxygen. Sea water typically contains between 8-10 ppm of dissolved oxygen.

Product Application:

Before pumping the hydrostatic test water into the pipeline, a specific treatment regime should be followed to avoid interactions between the products, The oxygen scavenger will deactivate the biocide, so they should not be mixed. The following is a recommended procedure for treating and mixing the water,

1. Measure the amount of dissolved oxygen in the water to be treated. Determine the amount of oxygen scavenger needed (11ppm OSW490 per

ppm oxygen in the water).

2. To remove oxygen, continuously inject the required amount of OSW490 into the seawater upstream of the seawater tank. Allow approximately 3 to 4 minutes for complete scavenging (**see table A below**). Best results are achieved in a closed system to avoid oxygen re-contamination. Because XC102 will interact with the oxygen scavenger, it is important to allow the recommended scavenging time to avoid biocide deactivation. However since the neutralization rate is 1:1 ratio the small OSW490 residual will not have much impact on the biocide treatment in this case.
3. Add the required amount of XC102 to the tank and mix gently or pump in on the fly.

Table A

Temp	pH	O_2 Concentration in ppm after time in minutes									
		0	0.5	1	1.5	2	3	4	5	6	7
20°C	pH 5	8.2	3.8	1.6	1.3	0.9	0.7	0.4	0.2	0.1	0
	pH 6	9	4.3	1.2	0.9	0.6	0.4	0.2	0.1	0	
	pH 7	7.5	6	1.9	0.6	0.3	0.1	0			
30°C	pH 5	7.1	2.9	2.1	1.4	0.6	0.4	0.2	0.1	0	
	pH 6	6.8	1.7	0.6	0.4	0.2	0.1	0			
	pH 7	6.8	1.2	0.6	0.2	0.1	0				

Fluid Disposal:

HYDROSTATIC TEST FLUIDS CONTAINING RESIDUAL LEVELS OF BIOCIDE SHOULD BE DISPOSED OF IN ACCORDANCE WITH PERTINENT STATE AND FEDERAL REGULATIONS.

Hydrostatic test fluids containing XC102 bactericide may be detoxified prior to their release to surface waters, dependent upon the residual level of biocide. A 1:1 ratio of OSW490 should be used if neutralization is necessary. An in-line mixer or surge tank should be used to promote mixing of the detoxifying agent with the hydrostatic test water. A 30-second contact time is sufficient for detoxification to take place. Dilution of the hydro test water with additional seawater can also help to achieve detoxification therefore minimizing risks. If the discharge from a hydrostatic test

displaces a substantial percentage of the receiving water (such as a stream or a small bay), then the discharge should be re-aerated to avoid a fish kill due to the lack of oxygen. Discussions should be held with Cetco to inform them of the relatively small amount of production chemicals that will be returning to VK900 in the dewatering operation. These products are listed below:

PAO3045 – Paraffin Inhibitor

PAO3042 – Asphaltene Inhibitor

PFR14UC – Flushing Solvent

Transaqua – Storage Fluid

Methanol –

Cetco can design their system to capture most of these fluids using their weir tanks, etc. Small residuals can be filtered. Baker representatives can be available to participate in the discussion.

Material Safety Data Sheet

1. Product and company identification

Product name	: OSW490 OXYGEN SCAVENGER
Supplier	: Baker Petrolite A Baker Hughes Company 12645 W. Airport Blvd. Sugar Land, TX 77478 For Product Information/MSDSs Call: 800-231-3606 (8:00 a.m. - 5:00 p.m. cst, Monday - Friday) 281-276-5400
Material Uses	: Special: Oxygen scavenger.
Code	: OSW490
Validation date	: 3/9/2010.
Print date	: 3/9/2010.
Version	: 3
Responsible name	: Global Regulatory Affairs - Telephone 281-276-5400 or 800-231-3606
In case of emergency	: CHEMTREC: 800-424-9300 (U.S. 24 hour) Baker Petrolite: 800-231-3606 (001)281-276-5400 CANUTEC: 613-996-6666 (Canada 24 hours) CHEMTREC Int'l 01-703-527-3887 (International 24 hour)

2. Hazards identification

Physical state	: Liquid. [Clear.]
Odor	: Pungent.
Color	: Greenish-yellow.
OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Emergency overview	: WARNING! CAUSES RESPIRATORY TRACT, EYE AND SKIN IRRITATION. Do not get in eyes. Avoid breathing vapor or mist. Avoid contact with skin and clothing. Use only with adequate ventilation. Keep container tightly closed and sealed until ready for use. Wash thoroughly after handling.
Routes of entry	: Dermal contact. Eye contact. Inhalation.

Potential acute health effects

Inhalation	: Irritating to respiratory system.
Ingestion	: Ingestion may cause gastrointestinal irritation and diarrhea.
Skin	: Irritating to skin.
Eyes	: Severely irritating to eyes. Risk of serious damage to eyes.

Potential chronic health effects

Over-exposure signs/symptoms

Inhalation	: respiratory tract irritation, coughing
Ingestion	: None known.
Skin	: irritation, redness
Eyes	: pain or irritation, watering, redness

See toxicological information (section 11)

Additional information

Corrosive to metal.

3 . Composition/information on ingredients

Name	CAS number	%
Ammonium bisulfite	10192-30-0	30 - 60

4 . First aid measures

Eye contact : Get medical attention immediately. Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids.

Skin contact : In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention immediately.

Inhalation : Move exposed person to fresh air. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.

Ingestion : Wash out mouth with water. Do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.

Protection of first-aiders : No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

5 . Fire-fighting measures

Flammability of the product : In a fire or if heated, a pressure increase will occur and the container may burst.

Extinguishing media

Suitable : Use an extinguishing agent suitable for the surrounding fire.

Not suitable : None known.

Special exposure hazards : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.

Hazardous thermal decomposition products : *nitrogen oxides,sulfur oxides*

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

6 . Accidental release measures

Personal precautions : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment (see section 8).

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up

Small spill : Stop leak if without risk. Move containers from spill area. Absorb with an inert material. Dispose of via a licensed waste disposal contractor.

6 . Accidental release measures

Large spill : Stop leak if without risk. Move containers from spill area. Approach release from upwind. Dike spill area and do not allow product to reach sewage system or surface or ground water. Notify any reportable spill to authorities. (See section 12 for environmental risks and 13 for disposal information.) Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see section 1 for emergency contact information and section 13 for waste disposal.

If RQ (Reportable Quantity) is exceeded, report to National Spill Response Office at 1-800-424-8802.

7 . Handling and storage

Handling : Put on appropriate personal protective equipment (see section 8). Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Do not ingest. Avoid contact with eyes, skin and clothing. Avoid breathing vapor or mist. Use only with adequate ventilation. Empty containers retain product residue and can be hazardous. Do not reuse container.

Storage : Store in accordance with local regulations. Store in a dry, cool and well-ventilated area, away from incompatible materials (see section 10). Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

8 . Exposure controls/personal protection

Occupational exposure limits		TWA (8 hours)			STEL (15 mins)			Ceiling			
'gredients:	List name	ppm	mg/m³	Other	ppm	mg/m³	Other	ppm	mg/m³	Other	Notations
No exposure limit value known.											

If OSHA permissible exposure levels are shown above they are the OSHA 1989 levels or are from subsequent OSHA regulatory actions. Although the 1989 levels have been vacated the 11th Circuit Court of Appeals, Baker Hughes recommends that these lower exposure levels be observed as reasonable worker protection.

Recommended monitoring procedures : If this product contains ingredients with exposure limits, personal, workplace atmosphere or biological monitoring may be required to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment.

Engineering measures : Use only with adequate ventilation. If user operations generate dust, fumes, gas, vapor or mist, use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Hygiene measures : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Ensure that eyewash stations and safety showers are close to the workstation location. Take off contaminated clothing and wash before re-use.

Personal protection

Respiratory : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Hands : Chemical-resistant gloves: Butyl rubber gloves.

Eyes : Wear chemical safety goggles. When transferring material wear face-shield in addition to chemical safety goggles.

Skin : Wear long sleeves and other protective clothing to prevent repeated or prolonged skin contact.

9 . Physical and chemical properties

Physical state	:	Liquid. [Clear.]
Flash point	:	Not available.
Auto-ignition temperature	:	*Not available.*
Flammable limits	:	Not available.
Color	:	Greenish-yellow.
Odor	:	Pungent.
pH	:	5 to 5.5
	:	Neat - without dilution.
Boiling/condensation point	:	Not available.
Initial Boiling Point	:	Not available.
Melting/freezing point	:	Not available.
Relative density	:	1.298 (16°C)
Density	:	10.81 (lbs/gal)
Vapor density	:	>1 [Air = 1]
Odor threshold	:	Not available.
Evaporation rate	:	Not available.
VOC	:	Not available.
Viscosity	:	Not available.
Solubility (Water)	:	Soluble
Vapor pressure	:	Not available.
Pour Point	:	Not available.
Partition coefficient (LogKow)	:	Not available.

10 . Stability and Reactivity

Chemical stability	:	The product is stable.
Possibility of hazardous *reactions*	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Hazardous polymerization	:	Under normal conditions of storage and use, hazardous polymerization will not occur.
Conditions to avoid	:	No specific data.
Materials to avoid	:	Reactive or incompatible with the following materials: oxidizing materials, acids and alkalis.
***Hazardous decomposition* products**	:	*Under normal conditions of storage and use, hazardous decomposition products should* not be produced.
Conditions of reactivity	:	Non-flammable in the presence of the following materials or conditions: open flames, sparks and static discharge and heat.

11 . Toxicological information

No additional information.

Chronic toxicity Remarks

1) Ammonium bisulfite

Ammonium bisulfite is a component of this product. Prolonged contact can produce corrosion of the skin and permanent damage to the eye. Under acidic conditions, sulfur dioxide may be formed. Inhalation of sulfur dioxide can cause stricture of the esophagus, acute pulmonary edema, and respiratory failure. Sulfur dioxide has been linked to miscarriages, gynecological disease, and abnormal pregnancies (Reprotext).

The ACGIH exposure limits for sulfur dioxide are TWA of 2 ppm and STEL of 5 ppm. The OSHA exposure limit for sulfur dioxide is a TWA of 5 ppm.

12 . Ecological information

Aquatic ecotoxicity

Product/ingredient name	Result	Species	Exposure
OSW490 OXYGEN SCAVENGER	Acute LC50 103 mg/l	Fish - Bluegill sunfish	96 hours
	Acute LC50 100 mg/l	Fish - Threespine stickleback	96 hours

Conclusion/Summary : Not available.

Biodegradability

Conclusion/Summary : Not available.

Additional information

An EcoTox™ Report, and/or the material's environmental fate is available upon request at the following number: 1-800-235-4249, then press 4.

13 . Disposal considerations

Waste disposal : The generation of waste should be avoided or minimized wherever possible. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe way. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

sposal should be in accordance with applicable regional, national and local laws and regulations.

efer to Section 7: HANDLING AND STORAGE and Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION for additional handling information and protection of employees.

16 . Other information

NOTE: The information on this MSDS is based on data which is considered to be accurate. Baker Hughes, however, makes no guarantees or warranty, either expressed or implied of the accuracy or completeness of this information.

The conditions or methods of handling, storage, use and disposal of the product are beyond our control and may be beyond our knowledge. For this and other reasons, we do not assume responsibility and expressly disclaim liability for loss, damage or expense arising out of or in any way connected with the handling, storage, use or disposal of this product.

This MSDS was prepared and is to be used for this product. If the product is used as a component in another product, this MSDS information may not be applicable.

Material Safety Data Sheet

1. Product and company identification

Product name	: X-CIDE™ 102 INDUSTRIAL BACTERICIDE ™ a trademark of Baker Hughes, Inc.
Supplier	: Baker Petrolite A Baker Hughes Company 12645 W. Airport Blvd. Sugar Land, TX 77478 For Product Information/MSDSs Call: 800-231-3606 (8:00 a.m. - 5:00 p.m. cst, Monday - Friday) 281-276-5400
Material Uses	: Special: Industrial Bactericide.
Code	: XC102
Validation date	: 11/2/2009.
Print date	: 11/2/2009.
Version	: 3
Responsible name	: Global Regulatory Affairs - Telephone 281-276-5400 or 800-231-3606
In case of emergency	: CHEMTREC: 800-424-9300 (U.S. 24 hour) Baker Petrolite: 800-231-3606 (001)281-276-5400 CANUTEC: 613-996-6666 (Canada 24 hours) CHEMTREC Int'l 01-703-527-3887 (International 24 hour)

2. Hazards identification

Physical state	: Liquid.
Odor	: Fruity. Medicinal. [Strong]
Color	: Colorless.
OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Emergency overview	: DANGER! CAUSES EYE BURNS. CAUSES RESPIRATORY TRACT AND SKIN IRRITATION. MAY CAUSE ALLERGIC SKIN REACTION. MAY BE HARMFUL IF SWALLOWED. CONTAINS MATERIAL THAT MAY CAUSE TARGET ORGAN DAMAGE, BASED ON ANIMAL DATA. Do not breathe vapor or mist. Do not ingest. Do not get in eyes or on skin or clothing. Use only with adequate ventilation. Keep container tightly closed and sealed until ready for use. Wash thoroughly after handling.
Routes of entry	: Dermal contact. Eye contact. Inhalation.

Potential acute health effects

Inhalation	: Severely irritating to the respiratory system.
Ingestion	: Harmful if swallowed. May cause burns to mouth, throat and stomach.
Skin	: Severely irritating to the skin. May cause sensitization by skin contact.
Eyes	: Corrosive to eyes. Causes burns.

Potential chronic health effects

Chronic effects	: Contains material that may cause target organ damage, based on animal data. Once sensitized, a severe allergic reaction may occur when subsequently exposed to very low levels.
Target organs	: Contains material which may cause damage to the following organs: upper respiratory tract, skin, eye, lens or cornea.

Over-exposure signs/symptoms

Inhalation	: respiratory tract irritation, coughing
Ingestion	: None known.

2 . Hazards identification

Skin	: irritation, redness
Eyes	: pain, watering, redness
Medical conditions aggravated by over-exposure	: Pre-existing skin disorders and disorders involving any other target organs mentioned in this MSDS as being at risk may be aggravated by over-exposure to this product.

See toxicological information (section 11)

Additional information

Glutaraldehyde may stain skin and nails to brown or golden brown color.Glutaraldehyde can cause allergic contact dermatitis, asthma and rhinitis and may aggravate existing asthmatic conditions.

3 . Composition/information on ingredients

Name	CAS number	%
Glutaraldehyde	111-30-8	10 - 30

4 . First aid measures

Eye contact	: Get medical attention immediately. Immediately flush the eye(s) continuously with lukewarm, gently flowing water for at least 20-60 minutes while holding the eyelid(s) open.
Skin contact	: In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention immediately.
Inhalation	: Move exposed person to fresh air. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.
Ingestion	: Wash out mouth with water. Do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wear suitable protective clothing and gloves. Remove contaminated clothing and shoes.

5 . Fire-fighting measures

Flammability of the product	: In a fire or if heated, a pressure increase will occur and the container may burst.
Extinguishing media	
Suitable	: Use an extinguishing agent suitable for the surrounding fire.
Not suitable	: None known.
Special exposure hazards	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.
Hazardous thermal decomposition products	: carbon dioxide,carbon monoxide
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

6 . Accidental release measures

Personal precautions : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Do not breathe vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment (see section 8).

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up

Small spill : Stop leak if without risk. Move containers from spill area. Absorb with an inert material. Dispose of via a licensed waste disposal contractor.

Large spill : Stop leak if without risk. Move containers from spill area. Approach release from upwind. Dike spill area and do not allow product to reach sewage system or surface or ground water. Notify any reportable spill to authorities. (See section 12 for environmental risks and 13 for disposal information.) Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see section 1 for emergency contact information and section 13 for waste disposal.

If RQ (Reportable Quantity) is exceeded, report to National Spill Response Office at 1-800-424-8802.

7 . Handling and storage

Handling : Put on appropriate personal protective equipment (see section 8). Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Persons with a history of skin sensitization problems should not be employed in any process in which this product is used. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not ingest. Use only with adequate ventilation. Empty containers retain product residue and can be hazardous. Do not reuse container.

Storage : Store in accordance with local regulations. Store in a dry, cool and well-ventilated area, away from incompatible materials (see section 10). Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

8 . Exposure controls/personal protection

Occupational exposure limits		TWA (8 hours)			STEL (15 mins)			Ceiling			
Ingredient	List name	ppm	mg/m³	Other	ppm	mg/m³	Other	ppm	mg/m³	Other	Notations
Glutaraldehyde	US ACGIH OSHA PEL 1989	- -	- -	- -	- -	- -	- -	0.05 0.2	- 0.8	- -	

Consult local authorities for acceptable exposure limits.

Only components of this product with established exposure limits appear in the box above.

If OSHA permissible exposure levels are shown above they are the OSHA 1989 levels or are from subsequent OSHA regulatory actions. Although the 1989 levels have been vacated the 11th Circuit Court of Appeals, Baker Hughes recommends that these lower exposure levels be observed as reasonable worker protection.

Recommended monitoring procedures : If this product contains ingredients with exposure limits, personal, workplace atmosphere or biological monitoring may be required to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment.

Engineering measures : Use only with adequate ventilation. If user operations generate dust, fumes, gas, vapor or mist, use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

8 . Exposure controls/personal protection

'vgiene measures	: Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Ensure that eyewash stations and safety showers are close to the workstation location. Take off contaminated clothing and wash before re-use.

Personal protection

Respiratory	: Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.
Hands	: Chemical-resistant gloves: Nitrile or Neoprene gloves. PVC gloves. 4H gloves. Butyl rubber gloves.
Eyes	: Wear chemical safety goggles. When transferring material wear face-shield in addition to chemical safety goggles.
Skin	: Wear long sleeves and other protective clothing to prevent repeated or prolonged skin contact.

9 . Physical and chemical properties

Physical state	: Liquid.
Flash point	: Closed cup: >93.4°C (>200.1°F) [SFCC]
Auto-ignition temperature	: Not available.
Flammable limits	: Not available.
Color	: Colorless.
Odor	: Fruity. Medicinal. [Strong]
pH	: 3 to 4.5
	: Neat - without dilution.
›iling/condensation point	: Not available.
..itial Boiling Point	: Not available.
Melting/freezing point	: Not available.
Relative density	: 1.056 (15.6°C)
Density	: 8.8 (lbs/gal)
Vapor density	: >1 [Air = 1]
Odor threshold	: Not available.
Evaporation rate	: Not available.
VOC	: Not available.
Viscosity	: Dynamic (15.6°C): 4 cP
Solubility (Water)	: Soluble
Vapor pressure	: 4.1 kPa (31 mm Hg) at 37.8°C
Pour Point	: -6.7°C (19.9°F)
Partition coefficient (LogKow)	: Not available.

10 . Stability and Reactivity

Chemical stability	: The product is stable.
Possibility of hazardous reactions	: Under normal conditions of storage and use, hazardous reactions will not occur.
Hazardous polymerization	: Under normal conditions of storage and use, hazardous polymerization will not occur.
Conditions to avoid	: No specific data.
aterials to avoid	: Reactive or incompatible with the following materials: oxidizing materials, acids and alkalis.
Hazardous decomposition products	: Under normal conditions of storage and use, hazardous decomposition products should not be produced.

10 . Stability and Reactivity

Conditions of reactivity : Slightly flammable in the presence of the following materials or conditions: open flames, sparks and static discharge and heat.

11 . Toxicological information

Acute toxicity

Product/ingredient name	Result	Species	Dose	Exposure
Glutaraldehyde	LD50 Dermal	Rabbit	560 uL/kg	-
	LD50 Oral	Rat	134 mg/kg	-
	LC50 Inhalation Vapor	Rat	480 mg/m3	4 hours
X-CIDE™ 102 INDUSTRIAL BACTERICIDE	LD50 Dermal	Rabbit	13600 mg/kg	-
	LD50 Oral	Rat	1990 mg/kg	-

Carcinogenicity

Classification

Product/ingredient name	ACGIH	IARC	EPA	NIOSH	NTP	OSHA
Glutaraldehyde	A4	-	-	-	-	-

Chronic toxicity Remarks

1) Glutaraldehyde

Glutaraldehyde is a component of this product. In long-term experimental animal studies, glutaraldehyde caused liver damage in mice (ACGIH, 1992), but it was not neurotoxic in rats (Spencer et al, 1978).

Female rats had increased large granular lymphocytic leukemias after receiving glutaraldehyde in the drinking water at levels up to 1,000 ppm for 2 years (Andersen, 1996).

The results of genetic studies have been mixed with no conclusive evidence of positive effects.

In 2-year inhalation studies, there was no evidence of carcinogenic activity in male or female rats exposed to 250, 500 or 750 ppb, or in male or female mice exposed to 62.5, 125, or 250 ppb glutaraldehyde. Incidences of nasal and respiratory lesions were increased in both male/female rats and mice. Reduction in body weight, as compared to the controls was also noted.

Additional information

Draize Test Eye (Rabbit): Extreme Irritant/Corrosive.Draize Test Skin (Rabbit): Extreme Irritant.

12 . Ecological information

Aquatic ecotoxicity

Product/ingredient name	Result	Species	Exposure
X-CIDE™ 102 INDUSTRIAL BACTERICIDE	EC50 16 mg/l	Algae - *Selenastrum capricornutum*	96 hours
	EC50 8 mg/l	Algae - Chlorella *vulgaris*	96 hours
	EC50 1.8 mg/l	Algae - Skeletonema *costatum*	96 hours
	LC50 75 mg/l	Fish - Threespine stickleback	96 hours
	LC50 43 mg/l	Daphnia - Daphnia magna	48 hours
	LC50 42 mg/l	Fish - Bluegill sunfish	96 hours
	LC50 33 mg/l	Fish - Rainbow trout	96 hours
	LC50 28.4 ppm	Daphnia - Mysid	96 hours

12 . Ecological information

shrimp

Conclusion/Summary : Not available.

Biodegradability

Conclusion/Summary : Not available.

Additional information

An EcoTox™ Report, and/or the material's environmental fate is available upon request at the following number: 1-800-235-4249, then press 4.

13 . Disposal considerations

Waste disposal : The generation of waste should be avoided or minimized wherever possible. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe way. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Disposal should be in accordance with applicable regional, national and local laws and regulations.

Refer to Section 7: HANDLING AND STORAGE and Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION for additional handling information and protection of employees.

14 . Transport information

15 . Regulatory information

HCS Classification : Corrosive material
Sensitizing material
Target organ effects

U.S. Federal regulations : **United States inventory (TSCA 8b)**: All components are listed or exempted.

SARA 302/304/311/312 extremely hazardous substances: No products were found.
SARA 302/304 emergency planning and notification: No products were found.
SARA 302/304/311/312 hazardous chemicals: glutaral
SARA 311/312 MSDS distribution - chemical inventory - hazard identification: X-CIDE™ 102 INDUSTRIAL BACTERICIDE: Immediate (acute) health hazard

CERCLA: Hazardous substances.: methanol: 5000 lbs. (2270 kg);
Clean Water Act (CWA) 307: No products were found.
Clean Water Act (CWA) 311: No products were found.

15 . Regulatory information

Clean Air Act (CAA) 112 accidental release prevention: No products were found.

Clean Air Act (CAA) 112 regulated flammable substances: No products were found.

Clean Air Act (CAA) 112 regulated toxic substances: No products were found.

Clean Air Act Section 112(b) Hazardous Air Pollutants (HAPs) : Not listed

United States inventory (TSCA 8b) : All components are listed or exempted.

Canada

WHMIS (Canada) : Class D-1B: Material causing immediate and serious toxic effects (Toxic).
Class D-2A: Material causing other toxic effects (Very toxic).
Class D-2B: Material causing other toxic effects (Toxic).
Class E: Corrosive material

Canada (CEPA DSL): : All components are listed or exempted.

Additional information

This product is subject to regulation under the US Federal Insecticide, Fungicide and Rodenticide ACT (FIFRA) and is therefore exempt from US Toxic Substance Control Act (TSCA) Inventory listing requirements. EPA Registration No. 10707-40

16 . Other information

Label requirements : CAUSES EYE BURNS. CAUSES RESPIRATORY TRACT AND SKIN IRRITATION. MAY CAUSE ALLERGIC SKIN REACTION. MAY BE HARMFUL IF SWALLOWED. CONTAINS MATERIAL THAT MAY CAUSE TARGET ORGAN DAMAGE, BASED ON ANIMAL DATA.

National Fire Protection Association (U.S.A.) :

Date of printing : 11/2/2009.

Indicates information that has changed from previously issued version.

Notice to reader

NOTE: The information on this MSDS is based on data which is considered to be accurate. Baker Hughes, however, makes no guarantees or warranty, either expressed or implied of the accuracy or completeness of this information.

Client:	Helix ESG		Client Contract No.:	WPSS-Q-014550-03
Operational Start:	Date:	7 August 2011	Time:	04:00
Location:	M/V Helix Express			

Description:

WPSS will begin work filling the West and East Raton South Flowlines from the deck of the M/V Helix Express.

The fill will consist of flooding the pipelines with no pig and injecting OSW490 Oxygen scavenger at 110 ppm and XC-102 Biocide at 600 ppm.

Commencement of the operation described above may be started. All relevant procedures & work instructions have been adhered to.

Client:	Helix ESG		Client Contract No.:	337346
Operational End:	Date:	August 8th 2011	Time:	14:00
Location:	Helix Express			

Description:
WPSS has completed filling the West and East Raton South Flowlines from the deck of the M/V Helix Express.
The flooding was completed with no pig and injecting OSW490 Oxygen Scavenger at 110 ppm and XC-102 Biocide at 600 ppm.

The operation described above has been completed in full conformity with the client.

TABLE OF CONTENTS

1.0 GENERAL

Weatherford Pipeline and Specialty Services, hereinafter referred to as "WPSS", has been requested by Helix Energy Solutions Group, hereinafter referred to as "Helix", to perform pre-commissioning hydrotest the crude oil field tieback to the existing Chevron production facility. The tie back consists of twin 4.5-inch O.D, 27.5 mile long flowlines terminating by means of Pipeline End Termination structures (PLETs) near the Raton South wellhead. The tie-in at the Raton South well will be achieved by installing a diverless vertically installed connection jumper. WPSS will have flooded the flowlines beginning Hydrotest operations. This scope of work will take place on the Chevron platform located in Viosca Knoll (VK) 900.

WPSS will Hydrotest from a tapped flange on one riser against a tapped flange on top of the second riser. The test medium will be filtered untreated seawater. Following the Hydrotest WPSS will bleed down the hydrotest water overboard and disconnect their spread from the risers.

System	Length [ft]	OD [in]	WT [in]	ID [in]	WD (max.) [ft]	Test Pressure [psig]	Hold Period [hr]

*Including Riser

1.1 Objective

The objective of this document is to provide all personnel a clear understanding of the work scope to ensure the work is completed in a safe, efficient and timely manner. Furthermore it is designed to be an inclusive source of information regarding the activities associated with the Hydrostatic testing operation to be performed on Noble Raton South Development Project, from the Chevron platform, VK900.

scfm	Standard Cubic Feet Per Minute

Each Operational Procedure has an ITP. In the ITP involvement codes and definitions are used as follows:

"P" - Performance

The Organization involved is responsible for the physical performance of the Inspection Check or Task and for issuing the relevant Quality Record (definition of Record as per ISO 9000:2000 Quality Management Systems – Fundamentals and Vocabulary, para 3.7.6).

"W" - Witness

The Organization involved elects to attend to the Inspection or Check performed by the Performing Organization. The Performing Organization shall notify the Witnessing Organization of the Inspection or Check performance within 24 hours of activity being preformed. Non-attendance of the Witnessing Organization at the notified time shall under no circumstances delay the Inspection or Check being carried out by the Performing Organization.

"H" - Validation (Hold Point)

The Organization involved attends the Inspection or Check performed by the Performing Organization to record the Inspection or Check results. The Performing Organization shall notify the Validation Organization of the Inspection or Check performance within 24 hours of activity being preformed and shall carry out the Inspection or Check only if the Validation Organization is attending. A written waiver from the Validation Organization is required before execution of the Inspection or Check can take place in their absence.

"R" - Review

The Organization involved is responsible for the performance of a review of relevant documentation and/or Quality Records.

"M" - Monitor

The Organization indicated may monitor the works during routine surveillance.

1.4 RESOURCES

Helix shall provide the following services to support the activities as outlined herein:

- Marine transportation for WPSS equipment and personnel
- Helicopter Transportation (if applicable)
- Meals and lodging for four (4) WPSS personnel onboard the Chevron platform
- Crane services at dock and offshore facilities to transfer WPSS equipment and personnel
- Utility air supply for WPSS equipment onboard the Chevron platform (185cfm @ 100psi)
- Water supply for WPSS equipment onboard the Chevron platform (min 10gpm @ 100psi)
- Electrical supply for WPSS equipment onboard the Chevron platform (110v, 15amp)
- Offshore Rigging / scaffold support as needed

2.0 SAFETY

2.1 SUMMARY

WPSS is fully committed to providing a quality H.S.E. performance in all facets of its operations, at all locations and on all projects in which WPSS is involved. It is a requirement for all work procedures that pre-job safety analysis or JSAs be performed and that all pertinent information be distributed and discussed with all personnel involved prior to start of work. Furthermore, safety meetings shall be held prior to every shift to distribute current information and discuss hazards and safe procedures of the job at hand. WPSS personnel must wear proper PPE on the job; hard hat, safety shoes and safety glasses and other PPE as stipulated by the offshore vessel/platform. There is a possibility diluted chemical present in hydrotest water. All personnel will take precautions to not come in contact with hydrotest discharge water or wear the correct PPE if contact is likely. MSDS for X-cide102 and OSW490 in appendix D.

2.2 SAFETY MEETINGS & JOB SAFETY ANALYSIS

Upon arrival at the work location, a site specific safety meeting will be held to review all aspects of safety relating to the work and location. All relevant personnel will be required to attend. This meeting will be recorded by WPSS.

A Job Safety Analysis (JSA) will be conducted before commencing each new operation and at the beginning of each work shift. The JSAs shall outline tasks to be performed and identify the associated risks for each task along with mitigating procedures to minimize the anticipated risk exposure. All work crewmembers shall participate in the JSA process to ensure everyone understands the risk and mitigating procedures. The JSAs shall also review the means of egress at the specific location.

The JSAs shall include all hazards, control measures, emergency response, fire prevention, safe areas, escape routes, muster points, use of signs and barriers, PPE, handling of hazardous material, awareness of high pressure, noise, First Aid facilities and accident and incident reporting.

Any accidents or incidents, including near misses, will require a total **"ALL STOP"** with a post review of the situation before any activity can resume. With regards to an unsafe act or situation, any personnel involved in operations can give an **"ALL STOP"** but only the WPSS Superintendent in conjunction with the Company Representative and Operations can give an **"ALL START"**.

NOTE:

At any point in time during the WPSS operations, an individual has the right to **"STOP THE JOB"** if there are "unsafe" activities or situations occurring.

2.3 PERMIT TO WORK

WPSS personnel are to ensure that a permit to work is issued by Offshore Vessel / Client on all offshore facilities / vessels thus ensuring that all parties under WPSS control are in full compliance with the facilities operating practices.

2.4 High Pressure Systems Precautions (Air, chemical or Water)

When operating in the vicinity of hoses, equipment, or piping under pressure, all personnel must adhere to the following precautions:

- During pressurization and hold period, a **minimum 15 foot** stand-off distance shall be maintained from test flange/head and a **minimum 10 foot** stand-off distance from pressurized piping. In the case of limited space due to SIMOPS, the client will assist WPSS crew in allocating stand-off distances during the Hydrotesting operations.
- Placement of the test flange/head should take into consideration the ballistic flight path if failures were to occur on the autoclave port fitting and separation from the blind flanges was to occur.
- No work is to be conducted on the pressurized system. In the event that a leak is found, the system must be de-pressurized to ambient pressure or "double-block" isolation must be used before any work can be conducted on the system.
- A suitable area around test spread shall be taped off (red danger tape) to prevent unauthorized entry to area's near the test head.
- Prior to pressurization, the location and test activity shall be announced over the intercom/loud-speaker system.
- A suitable means shall be put in place to provide visual leak detection without having to approach the test flange/head during pressurization or hold period to accomplish the visual verification.
- Whip checks will be utilized to secure all hoses no matter the level of pressure; this will include all "standard" whip checks and/or rope for larger hoses when no "standard" whip checks exist.
- Before beginning work on any operation, the WPSS Crew on site will conduct a walk-through to check each piece of equipment and ensure it is correctly installed and secured with whip checks.

2.5 Equipment Transfer

Prior to mobilization the following will be confirmed for each item of WPSS equipment to be lifted:

- All equipment will be designed to adhere to standards for offshore transit/transfer and operations.
- All equipment will be clearly marked on the lifting frame with its weight.
- Equipment slings, shackles, stingers, etc. will be certified within the last 6 months and certification shall accompany the equipment.

WPSS personnel will adhere to the following precautions when operating in the vicinity of items being lifted overhead:

- Proper PPE will be worn by all individuals.
- Only one individual will provide hand-signals to the crane/forklift operator.
- WPSS personnel will clearly define a plan prior to beginning the lift, and will execute the plan as it was designed.

2.6 Environmental Safety

The following project specific precautions will be put in place to avoid any undue damage to the environment:

- To prevent spillage of fuel during pump to tank transfers, these operations will be performed over drip-pans or pads at all times.
- Water Disposal methods will be in place to remove the water brought onto the facilities and will be disposed of in a manner in accordance with regulations

2.7 Equipment Certification

All WPSS stand alone equipment (containers, pumps, compressors, tanks and hose baskets) shall be supplied with suitable rigging for offshore lifting and designed in accordance with Weatherford installation basis of design and shall include valid certification (certified lifting points and lifting gear). All mechanical instrumentation and electrical gear shall be calibrated by authorized Third party no sooner than 1 month of mobilization of the spread with 6 months validity certificates from time of delivery or testing.

3.0 Equipment, Personnel & Materials Required

3.1 WPSS Hydrotest Equipment

Item	Description	Qty	Dimensions (L x W x H) [ft]	Weight [lbs]
1.	Diesel Driven Test Pump	2	14 x 7 x 6	12,500

4.	Crane Access	As needed

3.4 Helix Provisions

Item	Description	Qty
1.	Studs, Nuts and Gasket for Tie –in Flange	2 sets

4.0 Operational Procedures

4.1 Equipment and Personnel Mobilization

Once confirmation to mobilize has been received from Helix, WPSS equipment and personnel will be transferred to the Client Specified Dockyard Location for transit to the offshore location. Lift transfers for equipment and personnel will be conducted by the Helix personnel. Staging of the equipment will be carried out by Helix personnel with the assistance of WPSS personnel. All personnel working under WPSS will undergo the vessel orientation before any work can commence.

Item	Description	Reference	WPSS Initial/ Date	Helix Initial/ Date
1.	Prior to mobilization of equipment and personnel, the WPSS crew will stage equipment and review the following: • Pre-Test of manifolds/hoses per workshop procedure • Start-up and run of pumps • Check certification of hoses, lifting slings, shackles, lifting point, etc. • Check instrumentation for operating pressure: 0-15,000psig, 0.1% FS accuracy. • Operating Temperature of 0 ºF to 150 ºF • Check Keller Gauge for Hydrotest operating pressure: 1000bar (14,500psi) • PRV set at 12,000 psig for Hydrotest	WPSS-14550-MAN-01	P	W
2.	Prior to performing any work, WPSS Supervisor will conduct JSA Ensure all relevant parties have read and signed JSA	3-4-GL-GL-PSS-00004	P	W

4.2 PREPARATION OF HYDROTEST EQUIPMENT

The WPSS site representative shall agree with the Site Safety Officer the positions of a safe boundary to prevent unauthorized entry to WPSS temporary work zone. Danger tape will be erected at agreed points to warn all personnel in the vicinity of the intended operation. WPSS instrumentation is ideally to be positioned outside or at the limits of the agreed test area. No work other than that controlled by the WPSS and Helix site representative shall be allowed within the defined boundary during operation for which WPSS is responsible and entry by un-authorized personnel shall be prohibited.

The WPSS site representative shall be responsible for ensuring that the equipment and instrumentation that is delivered to the site is in accordance with the equipment and instrument lists. He shall also check that all relevant items are equipped with valid Calibration Certification from a recognized and independent certifying agency/lab. This will include, but may not be limited to Calibration Certificates, Hose Test Certificates and Lifting Gear Certificates.

- Keller Gauge instrumentation shall have a range of minimum 1.25 times the specified test pressure and shall have accuracy better than ±0.1 bar and a sensitivity better than 0.05 bar.
- The volume of water added or subtracted during the pressure test shall be measured with equipment having accuracy better than ±1.0% and a sensitivity better than 0.1%.
- Temperature measuring instruments and recorders shall have accuracy better than ±1.0ºC and sensitivity of 0.1ºC.
- Pressure and temperature recorders shall be used to provide a graphical record of the pressure test for the total duration of the test with the main graphical output being supplied by the Keller Gauge.

All Calibration and Lifting Gear Certificates shall be available for inspection prior to equipment mobilization and be available for inspection by the Helix site representatives if requested. All calibration & test certificate to be submitted by WPSS shall be included in the Mobilization Manual. All original documents shall have a relevant QC stamp & certified as a true copy by WPSS. All certificates shall also be stamped and signed by the inspection company.

Original copies of all certificates shall remain in the possession of the WPSS site representative at all times. Copies can be produced and submitted to the Helix site representative if requested.

4.3 HYDROTEST EQUIPMENT RIG-UP

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
1.	Obtain Permit to Work for rig up and function testing and commence positioning of the equipment as per General Arrangement drawings. Conduct JSA/Tool Box Talk.	3-4-GL-GL-PSS-00004	P	P	W
2.	Lift the Hydrotest pumps and equipment to stage in the planned position if not already done during mobilization of equipment.	5-4-GL-GL-PSS-00006	P	P	W
3.	Confirm all equipment is functional and complete daily maintenance and fuel checks.	5-4-GL-GL-PSS-00006	P	W	W
4.	Install Hydrotest test flange(s) on top of East and West riser(s)	5-4-GL-GL-PSS-00006	P	P	W
5.	Connect the supply hose from platform fire water supply to the inlet of the pressurizing pump.	5-4-GL-GL-PSS-00006	P	W	W
6.	Connect the MP injection hose from the pressurization pump to the double block and bleed assembly. Install the heavy-duty whip checks to all connections and fully tighten.	5-4-GL-GL-PSS-00006	P	W	W
7.	Connect the MP Injection hose from the double block and bleed assembly to the isolation valve assembly on the hydrotest test flange on East Riser. Install the heavy-duty whip checks to all connections and fully tighten.	5-4-GL-GL-PSS-00006	P	W	W
8.	Connect the instrumentation hose to the valve assembly on the hydrotest flange on West Riser and route the hose in the direction of the test pump. Install the heavy-duty whip checks and fully tighten connections.	5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
9.	Connect the MP depressurization hose from the double block and bleed assembly and route the hose in a safe manner to be discharged over board. NOTE: Install the heavy-duty whip checks to all connections and fully tighten. Securely tie depressurization line off.	5-4-GL-GL-PSS-00006	P	W	W
10.	Prior to testing all temperature monitoring instrumentation will be positioned to allow for thermal equilibrium to be achieved. Spot the pipe wall temperature "Circular Chart" recorder adjacent to the pipeline and attach probe to the pipe wall out of direct sunlight. Ensure that adequate lagging has been installed to the probe to prevent interference from direct sunlight. Ensure that the temperature "Circular Chart" recorder is in the working position and that a new chart and battery have been installed. *Check the orientation of the chart and ensure that the time on the chart is correct.*	5-4-GL-GL-PSS-00006	P	W	W
11.	Install the Keller gauge and 15,000psi pressure recorder to the instrument line from the test flange and fit the PRV. Note the elevation of the instrumentation in reference to the deck. Ensure that the pressure chart recorder is in the working position and that a new chart and battery have been installed. *Check the orientation of the chart and ensure that the time on the chart is correct.* *Instrument Deck Elevation*	5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
12.	With all equipment in place the Subcontractor Project Engineer, and relevant platform personnel and walk through the testing spread and will carry out a Safety walk-through of rig-up.	5-4-GL-GL-PSS-00006	P	H	H
13.	Upon confirmation of safety walk-through, WPSS will erect safety barriers and place safety warning signs and check functionality of WPSS hydrotest spread	5-4-GL-GL-PSS-00006	P	W	W

4.4 FINAL PLATFORM PREPARATIONS

Safety barriers and warning signs shall be erected around the work area.

Upon completion of all hose and pipework connections to the temporary pumping station, the hoses and manifolds will be subjected to a leak test to 1.05 times the hydrotest pressure of the system (11,000psi). Back pressure on the injection hoses will be achieved by means of pressurizing against the isolation valves on the test flange. The tie-in point shall be the bleed connection located on the double block and bleed assembly fitted to the flange. All required instrumentation hoses shall be connected to the bleed point and pressurized during the injection hose test. The holding time will be no less than 10 minutes. Any leaks found shall be rectified to ensure that the system is leak free. All supply lines will be checked for leaks by utilizing the supply pressure from the platform water supply. Contractor representative witnesses all leak checks.

All instrumentation is to be checked and inspected prior to start-up. These checks are to determine the reliability of the required instruments during the entire phase of operations. All instruments are to be at the zero point prior to start-up. As part of function testing the Pressure Recorder is to be tested against the main pressure measurement Keller Gauge and spot readings taken and officially recorded to verify accuracy of all instruments.

All mechanical devices shall be function tested prior to the commencement of operations. These checks shall include, but not be limited to the start-up of all diesel driven units, function of speed controllers to allow for variable speed operations, the necessary pre-start maintenance checks on all units (oil, water, fuel, etc) A pre-start check sheet is to be completed and filed in the site office.

4.5 PRESSURE CORRECTION

Elevation of instrumentation above sea level is to be confirmed following final installation of instrumentation to determine test pressure with reference to MSL. For example, if the instrumentation is placed on the 100' deck level this shall be a pressure compensation of 100' x 0.445 = 44.5psig. A test pressure of 10,313psig at the 100' level would mean the pipeline would be pressurized to 10,268.5 + 44.5 = 10,313psig at mean sea level.

Top Deck	-	100 feet above sea level
Gauge tied-off 5 feet above deck floor	-	5 feet
Total above sea level	-	**105 feet**

Pressure Compensation - 105 feet x .445 = 47 psig

In order to have test pressure at sea level to be 10,313 psi, the reading on the Gauge will be;

10,313 psi – 47 psi = 10,266 psig.

This is from:

Pressure Correction = $(\rho \times g \times h) \div 100000$

Where:

ρ = Density of the test medium in kg/m^3 (sea water is $1024kg/m^3$)

g = Acceleration due to gravity (9.81m/s)

h = Height above test medium (-32m)

$(1024 \times 9.81 \times 32) \div 100000$ = -3.21barg = **-46.41psig**

All non return valves are to be inspected to check that orientation is correct. All pressure relief valves are to be inspected to determine that the valves are set at the correct pressure.

4.6 Valve and System Status Checklist

4.7 HYDROTEST OPERATIONS

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
1.	The Helix representative shall review and sign the Commencement Report prior to the start of any operations associated with the Hydrotesting operation.	5-4-GL-GL-PSS-00011	P	P	W
2.	The WPSS Supervisor shall conduct a JSA/Toolbox Talk at the beginning of the operation with all personnel who will be operating, observing or witnessing for the duration of the operation. This JSA/Toolbox Talk will be reviewed at shift handovers for the duration of the operation. Any new or changing hazards identified and updated as required.	3-4-GL-GL-PSS-00004	P	W	W
3.	Install pressure charts to the pressure and temperature recorder. Charts will be clearly indicate: • Pipeline Section • Date • Time • Phase of Operation • Recorder Serial Number • Range • Location Ensure that the clock is in the 24hr operating position, new pen, and new batteries are in place. The system is now ready for operation. Upon removal of any chart during the operation ensure that all charts have been signed-on by the Company, Contractor, Subcontractor and relevant third parties.		P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
4.	During the hydrotesting operation, the following parameters will be recorded and logged according to procedure: • Pipeline Pressure.....psig • Volume of water injected.....gallons • Ambient Air Temperature.....°F • Pipeline Wall Temperature.....°F Note: Temperature will be read from the Charts	5-4-GL-GL-PSS-00012			
5.	The flowline will have been previously free flooded and should be topped up to the test flange(s). Air will be bled off at the highest instrumentation point. Topping off of the topside piping will be done prior to pressurization if required.	5-4-GL-GL-PSS-00006	P	W	W
6.	Danger Tape off hydrotesting area and equipment and make a platform announcement of hydrotest operations.	5-4-GL-GL-PSS-00006	P	W	W
7.	Request Helix representative confirms topsides and subsea valves are properly aligned for hydrostatic testing as per valve and system status checklist (sec. 4.6)	5-4-GL-GL-PSS-00006	H	H	H
8.	Confirm water supply to pressure pump.	5-4-GL-GL-PSS-00006	P	W	W
9.	Walk the pressurization line and verify WPSS valves are per valve and system status checklist (sec. 4.6)	5-4-GL-GL-PSS-00006	P	W	W
10.	Start Hydrotest pump and adjust the pressurizing pump speed and commence the pressurization sequence. Pressurization to be done in a safe and controlled manner at approximately 15psig/min .	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
11.	Ensure that the pressurization rate does not exceed 15psig/min. Record the injected volumes in 15psig increments and add to the air inclusion report form.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
12.	Once the pipeline system has reached **525psig** at the instruments, stop pressurization pump. **Close Valve: ABV-4**	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
13.	Carry out a visual leak check on all connections. WPSS representative to complete the air inclusion calculations. Hold the pressure for a minimum of 15 minutes logging pressure every 5 minutes.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
14.	For the Air Inclusion calculation, the pipeline pressure versus injected volume will be calculated and presented graphically. With the air inclusion calculation completed verify that the air content is within the specification of less than 0.5% for a non-pigged pipeline. Present the results to Company and Contractor representatives and if the air content is less than 0.5%, obtain permission from the Company representative to continue with the hydrotest. If the air content is greater than 0.5%, obtain written confirmation from Helix to continue or to bleed down.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
15.	**OPEN Valve: ABV-4** Start the pressurizing pump, adjust the pressurizing pump speed and re-commence the pressurization sequence.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
16.	Adjust the speed on the pressurizing pump, ensuring that the pressurization rate does not exceed 15psig/min. Record the injected volumes in 100psig increments. WPSS representative shall continuously analyze data during pressurization, should data indicate any abnormalities pressurization is be halted and only restarted following instruction from Contractor representative	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
17.	Once the pipeline system has reached 35% of test pressure at the instruments (3,610psig) Shutdown the pressurizing pump; **Close Valve: ABV-4**	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
18.	Carry out a visual leak check on all connections and hold the pressure for a minimum of 15 minutes logging pressure every 5 minutes	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
19.	If a leak occurs during the pressurization of the riser and flowline, the pressure pump will be shut down and isolated. All hoses and equipment shall be checked for visual leaks on the topside of the platform prior to the Helix representative's inspection for leaks within the risers, flowline, and subsea structures.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
20.	If there are no visible leaks or pressure drops, continue pressuring the flowlines. **OPEN Valve: ABV-4** Start the pressurizing pump, adjust the pressurizing pump speed and re-commence the pressurization sequence. Adjust the speed on the pressurizing pump, ensuring that the pressurization rate does not exceed 15 psig/min. Record the injected volumes in 100psig increments. WPSS Representative shall continuously analyze data during pressurization, should data indicate any abnormalities pressurization is be halted and only restarted following instruction from Contractor representative	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
21.	Once the pipeline system has reached 50% of test pressure at the instruments **(5,166psig)** Shutdown the pressurizing pump; **Close Valve: ABV-4**	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
22.	Carry out a visual leak check on all connections and hold the pressure for a minimum of 15 minutes logging pressure every 5 minutes	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
23.	If there are no visible leaks or pressure drops, continue pressuring the flowlines. **OPEN Valve: ABV-4** Start the pressurizing pump, adjust the pressurizing pump speed and re-commence the pressurization sequence. Adjust the speed on the pressurizing pump, ensuring that the pressurization rate does not exceed 15psig/min. Record the injected volumes in 100psig increments. WPSS Representative shall continuously analyze data during pressurization, should data indicate any abnormalities pressurization is be halted and only restarted following instruction from Contractor representative	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
24.	Once the pipeline system has reached 80% of test pressure at the instruments (**8,250psig**) Shutdown the pressurizing pump; **Close Valve: ABV-4**	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
25.	Carry out a visual leak check on all connections and hold the pressure for a minimum of 15 minutes logging pressure every 5 minutes	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
26.	If there are no visible leaks or pressure drops, continue pressuring the flowlines. **OPEN Valve: ABV-4** Start the pressurizing pump, adjust the pressurizing pump speed and re-commence the pressurization sequence. Adjust the speed on the pressurizing pump, ensuring that the pressurization rate does not exceed 15psig/min. Record the injected volumes in 100psig increments. WPSS Representative shall continuously analyze data during pressurization, should data indicate any abnormalities pressurization is be halted and only restarted following instruction from Contractor representative	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
27.	Once the pipeline system has reached 95% of test pressure at the instruments (9,797psig) Shutdown the pressurizing pump; **Close Valve: ABV-4**	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
28.	Carry out a visual leak check on all connections and hold the pressure for a minimum of 15 minutes logging pressure every 5 minutes	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
29.	If there are no visible leaks or pressure drops, continue pressuring the flowlines. **OPEN Valve: ABV-4** With the system pressure at 95% of test pressure at the instruments (9,797psig) Reduce the speed of the pressurizing pump. Adjust the speed on the pressurizing pump, ensuring that the pressurization rate does not exceed 10psig/min. Record the injected volumes in 50psig increments.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
30.	With the system pressure at Test pressure(10, 313psig) Plus 200psi at the instruments (10,513psig) Shutdown the pressurizing pump. **Close Valve: ABV-4**	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
31.	The stabilization period will now commence. A minimum of one hour stabilization will be observed with the logging of parameters carried out at 5 minute intervals for the first two hours then at 15 minute intervals thereafter.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
32.	With pipeline temperature equalizing with seawater temperature, thermal equilibrium will be achieved and pipeline pressure will stabilize. When pressure and thermal stabilization has been confirmed all data will be presented to Company and Contractor representatives and permission gained to commence the 8 hour Hold Period. Examples of stabilization include when previous 4 reading are the same or decay rate is constant over some period of time and can be explained.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
33.	Should it be required, the pressure shall be increased to test pressure Plus 200psi (10,513psig) following commencement of the stabilization period by opening **ABV-4** on the valve manifold table and starting the pressurizing pump until test pressure is achieved. The pump will be isolated by valve **ABV-4** on valve manifold table with the pressurizing hoses between the pump and the valve manifold depressurized through **ABV-3** to isolate pump from system.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
34.	Once the 8 hour Hold Period commences, no visible topside or observable sub-sea leaks shall be allowed. If leaks are observed during the 8 hour Hold Period, the pipeline system will be depressurized, the leak(s) fixed and the Hydrotest restarted.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
35.	The pressure test Hold period shall be held for a minimum period of 8 hours. Readings of pressure and temperature shall be logged by the Keller Gauge every 15 seconds and at least every 15 minutes by the Technician. The pressure test is acceptable if: 1. The pressure does not drop below the designated test pressure; 2. There are no observable leaks in the pipeline system during the 8-hour hold period; and 3. There are no unexplainable pressure drops	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	H	H
36.	Upon acceptance of Hydrotest, Helix Representative will sign the WPSS Hydrotest Acceptance Certificate (5-4-GL-GL-PSS-00033) prior to commencing depressurization.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	R	R	R

4.8 System Depressurization

Item	Description	Reference	WPSS Initial/ Date	Helix Initial/ Date	Client Initial/ Date
1.	Upon the acceptance of the Hold period and charts and test acceptance certificates signed off by Helix, the pipeline system shall be depressurized.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
2.	Prior to depressurization the platform control room will be notified and all non-essential personnel will be cleared prior to commencing depressurizing operation.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
3.	The depressurization dump line from valves **ABV-6 & ANV-1** will have been installed prior to start of operation keeping the hose as short as possible yet routing the discharge safely over board. Hose will have been securely fastened.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
4.	**OPEN valve ANV-1 completely** **OPEN Valve: ABV-6** **Adjust ANV-1 to control depressurization rate** Commence de-pressurizing the pipeline system.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
5.	A sample of the discharge water will then be taken.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
6.	Depressurize in a safe and controlled manner control the depressurization rate by regulating the bleed valve ANV-1. Monitored pressure every 15minutes and every 15 seconds by the Keller Gauge.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	P	W	W
7.	Once the pipeline is at atmospheric static pressure (0psig), sign off on all charts and Operational Paperwork and complete a Completion Report Form.	5-4-GL-GL-PSS-00012 5-4-GL-GL-PSS-00006	R	R	R

4.9 EQUIPMENT DEMOBILIZATION

ITEM	DESCRIPTION	REFERENCE	WPSS INITIAL/ DATE	HELIX INITIAL/ DATE	CLIENT INITIAL/ DATE
1.	Await Helix representative's approval to begin demobilization of equipment and personnel.	5-4-GL-GL-PSS-00006	P	P	W
2.	Ensure all paperwork has been signed by Helix representative and / or relevant parties. • Commencement Reports • Daily Site Reports • Shift Handover Forms • Field Tickets • Pumping Reports • Job Safety Analysis (JSA's) • Post Job Evaluation • All Related Pressure Charts • All Related Temperature Charts • Completion Reports	5-4-GL-GL-PSS-00011 5-4-GL-GL-PSS-00006 5-4-GL-GL-PSS-00007 5-4-GL-GL-PSS-00012 3-4-GL-GL-PSS-00004 6-4-US-GL-PSS-00001 5-4-GL-GL-PSS-00013 5-4-GL-GL-PSS-00008	P	W	W
3.	The WPSS Supervisor shall conduct a JSA/Toolbox Talk at the beginning of the operation with all personnel who will be operating, observing or witnessing for the duration of the operation.	3-4-GL-GL-PSS-00004	P	W	W
4.	Break-down equipment spreads and prepare/secure delicate items prior to load-out.	5-4-GL-GL-PSS-00006	P	W	W
5.	Load-out equipment spread on WPSS supplied transportation. Ensure equipment is properly secured.	5-4-GL-GL-PSS-00006	P	W	W
6.	Demobilize equipment and personnel to the WPSS facilities at the following addresses: **Attn: Taylor Williams** **Phone: (713) 580-9700** **7721 Pinemont Road** **Houston, TX 77040-6203** **USA**	5-4-GL-GL-PSS-00006	P	W	W

Material Safety Data Sheet

1. Product and company identification

Product name	: OSW490 OXYGEN SCAVENGER
Supplier	: Baker Petrolite A Baker Hughes Company 12645 W. Airport Blvd. Sugar Land, TX 77478 For Product Information/MSDSs Call: 800-231-3606 (8:00 a.m. - 5:00 p.m. cst, Monday - Friday) 281-276-5400
Material Uses	: Special: Oxygen scavenger.
Code	: OSW490
Validation date	: 3/9/2010.
Print date	: 3/9/2010.
Version	: 3
Responsible name	: Global Regulatory Affairs - Telephone 281-276-5400 or 800-231-3606
In case of emergency	: CHEMTREC: 800-424-9300 (U.S. 24 hour) Baker Petrolite: 800-231-3606 (001)281-276-5400 CANUTEC: 613-996-6666 (Canada 24 hours) CHEMTREC Int'l 01-703-527-3887 (International 24 hour)

2. Hazards identification

Physical state	: Liquid. [Clear.]
Odor	: Pungent.
Color	: Greenish-yellow.
OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Emergency overview	: WARNING! CAUSES RESPIRATORY TRACT, EYE AND SKIN IRRITATION. Do not get in eyes. Avoid breathing vapor or mist. Avoid contact with skin and clothing. Use only with adequate ventilation. Keep container tightly closed and sealed until ready for use. Wash thoroughly after handling.
Routes of entry	: Dermal contact. Eye contact. Inhalation.

Potential acute health effects

Inhalation	: Irritating to respiratory system.
Ingestion	: Ingestion may cause gastrointestinal irritation and diarrhea.
Skin	: Irritating to skin.
Eyes	: Severely irritating to eyes. Risk of serious damage to eyes.

Potential chronic health effects

Over-exposure signs/symptoms

Inhalation	: respiratory tract irritation, coughing
Ingestion	: None known.
Skin	: irritation, redness
Eyes	: pain or irritation, watering, redness

See toxicological information (section 11)

Additional information

Corrosive to metal.

3 . Composition/information on ingredients

Name	CAS number	%
Ammonium bisulfite	10192-30-0	30 - 60

4 . First aid measures

Eye contact : Get medical attention immediately. Immediately flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids.

Skin contact : In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention immediately.

Inhalation : Move exposed person to fresh air. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.

Ingestion : Wash out mouth with water. Do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.

Protection of first-aiders : No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

5 . Fire-fighting measures

Flammability of the product : In a fire or if heated, a pressure increase will occur and the container may burst.

Extinguishing media

Suitable : Use an extinguishing agent suitable for the surrounding fire.

Not suitable : None known.

Special exposure hazards : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.

Hazardous thermal decomposition products : nitrogen oxides,sulfur oxides

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

6 . Accidental release measures

Personal precautions : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment (see section 8).

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up

Small spill : Stop leak if without risk. Move containers from spill area. Absorb with an inert material. Dispose of via a licensed waste disposal contractor.

6 . Accidental release measures

Large spill : Stop leak if without risk. Move containers from spill area. Approach release from upwind. Dike spill area and do not allow product to reach sewage system or surface or ground water. Notify any reportable spill to authorities. (See section 12 for environmental risks and 13 for disposal information.) Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see section 1 for emergency contact information and section 13 for waste disposal.

If RQ (Reportable Quantity) is exceeded, report to National Spill Response Office at 1-800-424-8802.

7 . Handling and storage

Handling : Put on appropriate personal protective equipment (see section 8). Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Do not ingest. Avoid contact with eyes, skin and clothing. Avoid breathing vapor or mist. Use only with adequate ventilation. Empty containers retain product residue and can be hazardous. Do not reuse container.

Storage : Store in accordance with local regulations. Store in a dry, cool and well-ventilated area, away from incompatible materials (see section 10). Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

8 . Exposure controls/personal protection

Occupational exposure limits		TWA (8 hours)			STEL (15 mins)			Ceiling			
gredients:	List name	ppm	mg/m³	Other	ppm	mg/m³	Other	ppm	mg/m³	Other	Notations
No exposure limit value known.											

If OSHA permissible exposure levels are shown above they are the OSHA 1989 levels or are from subsequent OSHA regulatory actions. Although the 1989 levels have been vacated the 11th Circuit Court of Appeals, Baker Hughes recommends that these lower exposure levels be observed as reasonable worker protection.

Recommended monitoring procedures : If this product contains ingredients with exposure limits, personal, workplace atmosphere or biological monitoring may be required to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment.

Engineering measures : Use only with adequate ventilation. If user operations generate dust, fumes, gas, vapor or mist, use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Hygiene measures : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Ensure that eyewash stations and safety showers are close to the workstation location. Take off contaminated clothing and wash before re-use.

Personal protection

Respiratory : Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Hands : Chemical-resistant gloves: Butyl rubber gloves.

Eyes : Wear chemical safety goggles. When transferring material wear face-shield in addition to chemical safety goggles.

Skin : Wear long sleeves and other protective clothing to prevent repeated or prolonged skin contact.

9 . Physical and chemical properties

Physical state	: Liquid. [Clear.]
Flash point	: Not available.
Auto-ignition temperature	: Not available.
Flammable limits	: Not available.
Color	: Greenish-yellow.
Odor	: Pungent.
pH	: 5 to 5.5
	: Neat - without dilution.
Boiling/condensation point	: Not available.
Initial Boiling Point	: Not available.
Melting/freezing point	: Not available.
Relative density	: 1.298 (16°C)
Density	: 10.81 (lbs/gal)
Vapor density	: >1 [Air = 1]
Odor threshold	: Not available.
Evaporation rate	: Not available.
VOC	: Not available.
Viscosity	: Not available.
Solubility (Water)	: Soluble
Vapor pressure	: Not available.
Pour Point	: Not available.
Partition coefficient (LogKow)	: Not available.

10 . Stability and Reactivity

Chemical stability	: The product is stable.
Possibility of hazardous reactions	: Under normal conditions of storage and use, hazardous reactions will not occur.
Hazardous polymerization	: Under normal conditions of storage and use, hazardous polymerization will not occur.
Conditions to avoid	: No specific data.
Materials to avoid	: Reactive or incompatible with the following materials: oxidizing materials, acids and alkalis.
Hazardous decomposition products	: Under normal conditions of storage and use, hazardous decomposition products should not be produced.
Conditions of reactivity	: Non-flammable in the presence of the following materials or conditions: open flames, sparks and static discharge and heat.

11 . Toxicological information

No additional information.

Chronic toxicity Remarks

1) Ammonium bisulfite

Ammonium bisulfite is a component of this product. Prolonged contact can produce corrosion of the skin and permanent damage to the eye. Under acidic conditions, sulfur dioxide may be formed. Inhalation of sulfur dioxide can cause stricture of the esophagus, acute pulmonary edema, and respiratory failure. Sulfur dioxide has been linked to miscarriages, gynecological disease, and abnormal pregnancies (Reprotext).

The ACGIH exposure limits for sulfur dioxide are TWA of 2 ppm and STEL of 5 ppm. The OSHA exposure limit for sulfur dioxide is a TWA of 5 ppm.

11 . Toxicological information

12 . Ecological information

Aquatic ecotoxicity

Product/ingredient name	Result	Species	Exposure
OSW490 OXYGEN SCAVENGER	Acute LC50 103 mg/l	Fish - Bluegill sunfish	96 hours
	Acute LC50 100 mg/l	Fish - Threespine stickleback	96 hours

Conclusion/Summary : Not available.

Biodegradability

Conclusion/Summary : Not available.

Additional information

An EcoTox™ Report, and/or the material's environmental fate is available upon request at the following number: 1-800-235-4249, then press 4.

13 . Disposal considerations

Waste disposal : The generation of waste should be avoided or minimized wherever possible. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe way. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Disposal should be in accordance with applicable regional, national and local laws and regulations.

Refer to Section 7: HANDLING AND STORAGE and Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION for additional handling information and protection of employees.

2. Hazards identification

Physical state	: Liquid.
Odor	: Fruity. Medicinal. [Strong]
Color	: Colorless.
OSHA/HCS status	: This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).
Emergency overview	: DANGER! CAUSES EYE BURNS. CAUSES RESPIRATORY TRACT AND SKIN IRRITATION. MAY CAUSE ALLERGIC SKIN REACTION. MAY BE HARMFUL IF SWALLOWED. CONTAINS MATERIAL THAT MAY CAUSE TARGET ORGAN DAMAGE, BASED ON ANIMAL DATA. Do not breathe vapor or mist. Do not ingest. Do not get in eyes or on skin or clothing. Use only with adequate ventilation. Keep container tightly closed and sealed until ready for use. Wash thoroughly after handling.
Routes of entry	: Dermal contact. Eye contact. Inhalation.

Potential acute health effects

Inhalation	: Severely irritating to the respiratory system.
Ingestion	: Harmful if swallowed. May cause burns to mouth, throat and stomach.
Skin	: Severely irritating to the skin. May cause sensitization by skin contact.
Eyes	: Corrosive to eyes. Causes burns.

Potential chronic health effects

Chronic effects	: Contains material that may cause target organ damage, based on animal data. Once sensitized, a severe allergic reaction may occur when subsequently exposed to very low levels.
Target organs	: Contains material which may cause damage to the following organs: upper respiratory tract, skin, eye, lens or cornea.

Over-exposure signs/symptoms

Inhalation	: respiratory tract irritation, coughing
Ingestion	: None known.

2 . Hazards identification

Skin	: irritation, redness
Eyes	: pain, watering, redness
Medical conditions aggravated by over-exposure	: Pre-existing skin disorders and disorders involving any other target organs mentioned in this MSDS as being at risk may be aggravated by over-exposure to this product.

See toxicological information (section 11)

Additional information

Glutaraldehyde may stain skin and nails to brown or golden brown color.Glutaraldehyde can cause allergic contact dermatitis, asthma and rhinitis and may aggravate existing asthmatic conditions.

3 . Composition/information on ingredients

Name	CAS number	%
Glutaraldehyde	111-30-8	10 - 30

4 . First aid measures

Eye contact	: Get medical attention immediately. Immediately flush the eye(s) continuously with lukewarm, gently flowing water for at least 20-60 minutes while holding the eyelid(s) open.
Skin contact	: In case of contact, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before reuse. Clean shoes thoroughly before reuse. Get medical attention immediately.
Inhalation	: Move exposed person to fresh air. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. Loosen tight clothing such as a collar, tie, belt or waistband. Get medical attention immediately.
gestion	: Wash out mouth with water. Do not induce vomiting unless directed to do so by medical personnel. Never give anything by mouth to an unconscious person. Get medical attention immediately.
Protection of first-aiders	: No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wear suitable protective clothing and gloves. Remove contaminated clothing and shoes.

5 . Fire-fighting measures

Flammability of the product	: In a fire or if heated, a pressure increase will occur and the container may burst.
Extinguishing media	
Suitable	: Use an extinguishing agent suitable for the surrounding fire.
Not suitable	: None known.
Special exposure hazards	: Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.
Hazardous thermal decomposition products	: carbon dioxide,carbon monoxide
Special protective equipment for fire-fighters	: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

6 . Accidental release measures

Personal precautions : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Do not breathe vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment (see section 8).

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Methods for cleaning up

Small spill : Stop leak if without risk. Move containers from spill area. Absorb with an inert material. Dispose of via a licensed waste disposal contractor.

Large spill : Stop leak if without risk. Move containers from spill area. Approach release from upwind. Dike spill area and do not allow product to reach sewage system or surface or ground water. Notify any reportable spill to authorities. (See section 12 for environmental risks and 13 for disposal information.) Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see section 1 for emergency contact information and section 13 for waste disposal.

If RQ (Reportable Quantity) is exceeded, report to National Spill Response Office at 1-800-424-8802.

7 . Handling and storage

Handling : Put on appropriate personal protective equipment (see section 8). Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Persons with a history of skin sensitization problems should not be employed in any process in which this product is used. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not ingest. Use only with adequate ventilation. Empty containers retain product residue and can be hazardous. Do not reuse container.

Storage : Store in accordance with local regulations. Store in a dry, cool and well-ventilated area, away from incompatible materials (see section 10). Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

8 . Exposure controls/personal protection

Occupational exposure limits		TWA (8 hours)			STEL (15 mins)			Ceiling			
Ingredient	List name	ppm	mg/m³	Other	ppm	mg/m³	Other	ppm	mg/m³	Other	Notations
Glutaraldehyde	US ACGIH OSHA PEL 1989	- -	- -	- -	- -	- -	- -	0.05 0.2	- 0.8	- -	

Consult local authorities for acceptable exposure limits.

Only components of this product with established exposure limits appear in the box above.

If OSHA permissible exposure levels are shown above they are the OSHA 1989 levels or are from subsequent OSHA regulatory actions. Although the 1989 levels have been vacated the 11th Circuit Court of Appeals, Baker Hughes recommends that these lower exposure levels be observed as reasonable worker protection.

Recommended monitoring procedures : If this product contains ingredients with exposure limits, personal, workplace atmosphere or biological monitoring may be required to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment.

Engineering measures : Use only with adequate ventilation. If user operations generate dust, fumes, gas, vapor or mist, use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

8 . Exposure controls/personal protection

Hygiene measures	: Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Ensure that eyewash stations and safety showers are close to the workstation location. Take off contaminated clothing and wash before re-use.

Personal protection

Respiratory	: Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.
Hands	: Chemical-resistant gloves: Nitrile or Neoprene gloves. PVC gloves. 4H gloves. Butyl rubber gloves.
Eyes	: Wear chemical safety goggles. When transferring material wear face-shield in addition to chemical safety goggles.
Skin	: Wear long sleeves and other protective clothing to prevent repeated or prolonged skin contact.

9 . Physical and chemical properties

Physical state	: Liquid.
Flash point	: Closed cup: >93.4°C (>200.1°F) [SFCC]
Auto-ignition temperature	: Not available.
Flammable limits	: Not available.
Color	: Colorless.

Initial Boiling Point	: Not available.
Melting/freezing point	: Not available.
Relative density	: 1.056 (15.6°C)
Density	: 8.8 (lbs/gal)
Vapor density	: >1 [Air = 1]
Odor threshold	: Not available.
Evaporation rate	: Not available.
VOC	: Not available.
Viscosity	: Dynamic (15.6°C): 4 cP
Solubility (Water).	: Soluble
Vapor pressure	: 4.1 kPa (31 mm Hg) at 37.8°C
Pour Point	: -6.7°C (19.9°F)
Partition coefficient (LogKow)	: Not available.

10 . Stability and Reactivity

Chemical stability	: The product is stable.
Possibility of hazardous reactions	: Under normal conditions of storage and use, hazardous reactions will not occur.
Hazardous polymerization	: Under normal conditions of storage and use, hazardous polymerization will not occur.
Conditions to avoid	: No specific data.
Materials to avoid	: Reactive or incompatible with the following materials: oxidizing materials, acids and alkalis.
Hazardous decomposition products	: Under normal conditions of storage and use, hazardous decomposition products should not be produced.

10 . Stability and Reactivity

Conditions of reactivity : Slightly flammable in the presence of the following materials or conditions: open flames, sparks and static discharge and heat.

11 . Toxicological information

Acute toxicity

Product/ingredient name	Result	Species	Dose	Exposure
Glutaraldehyde	LD50 Dermal	Rabbit	560 uL/kg	-
	LD50 Oral	Rat	134 mg/kg	-
	LC50 Inhalation Vapor	Rat	480 mg/m3	4 hours
X-CIDE™ 102 INDUSTRIAL BACTERICIDE	LD50 Dermal	Rabbit	13600 mg/kg	-
	LD50 Oral	Rat	1990 mg/kg	-

Carcinogenicity

Classification

Product/ingredient name	ACGIH	IARC	EPA	NIOSH	NTP	OSHA
Glutaraldehyde	A4	-	-	-	-	-

Chronic toxicity Remarks

1) Glutaraldehyde

Glutaraldehyde is a component of this product. In long-term experimental animal studies, glutaraldehyde caused liver damage in mice (ACGIH, 1992), but it was not neurotoxic in rats (Spencer et al, 1978).

Female rats had increased large granular lymphocytic leukemias after receiving glutaraldehyde in the drinking water at levels up to 1,000 ppm for 2 years (Andersen, 1996).

The results of genetic studies have been mixed with no conclusive evidence of positive effects.

In 2-year inhalation studies, there was no evidence of carcinogenic activity in male or female rats exposed to 250, 500 or 750 ppb, or in male or female mice exposed to 62.5, 125, or 250 ppb glutaraldehyde. Incidences of nasal and respiratory lesions were increased in both male/female rats and mice. Reduction in body weight, as compared to the controls was also noted.

Additional information

Draize Test Eye (Rabbit): Extreme Irritant/Corrosive.Draize Test Skin (Rabbit): Extreme Irritant.

12 . Ecological information

Aquatic ecotoxicity

Product/ingredient name	Result	Species	Exposure

United States inventory (TSCA 8b)	: *All components are listed or exempted.*

Canada

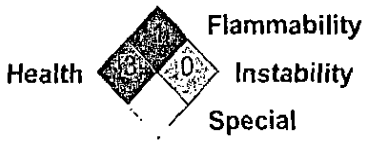
WHMIS (Canada)	: Class D-1B: Material causing immediate and serious toxic effects (Toxic). Class D-2A: Material causing other toxic effects (Very toxic). Class D-2B: Material causing other toxic effects (Toxic). Class E: Corrosive material
Canada (CEPA DSL):	: All components are listed or exempted.

Additional information

This product is subject to regulation under the US Federal Insecticide, Fungicide and Rodenticide ACT (FIFRA) and is therefore exempt from US Toxic Substance Control Act (TSCA) Inventory listing requirements. EPA Registration No. 10707-40

16 . Other information

Label requirements	: CAUSES EYE BURNS. CAUSES RESPIRATORY TRACT AND SKIN IRRITATION. MAY CAUSE ALLERGIC SKIN REACTION. MAY BE HARMFUL IF SWALLOWED. CONTAINS MATERIAL THAT MAY CAUSE TARGET ORGAN DAMAGE, BASED ON ANIMAL DATA.
National Fire Protection Association (U.S.A.)	:



Date of printing : **11/2/2009.**

Indicates information that has changed from previously issued version.

Notice to reader

NOTE: The information on this MSDS is based on data which is considered to be accurate. Baker Hughes, however, makes no guarantees or warranty, either expressed or implied of the accuracy or completeness of this information.

Project:	Helix Noble Raton		Project No.:	WPSS-014550
Client:	Helix ESG		Client Contract No.:	337346
Operational Start:	Date:	13 August 2011	Time:	1:00
Location:	VK-900 Platform			

Description:
WPSS will begin hydrostatic testing operations on the Raton South flowline system. All preparations are made and the pipeline has been made ready for testing.

Commencement of the operation described above may be started. All relevant procedures & work instructions have been adhered to.

Operational End:	Date:	August 14th 2011	Time:	06:00
Location:	Chevron Platform VK-900			

Description:

WPSS has pressurized and hydrostatically tested the Raton South looped flow lines. The test was held for 8 hours and depressurized and left at zero psig.

The operation described above has been completed in full conformity with the client.

Date & Time	Operational Details & Remarks
06-Aug-2011	
08:00	Vessel orientation.
9:00	Begin rigging up flooding equipment
11:45	50bbl tanks set up. Rigging up chemical and flooding pumps.
13:42	Begin test run of chemical injection pump for OSW 490.
14:00	2637 strokes to pump 5 gallons = .0019 gal/stroke. Injection determined to be 115 strokes to correctly dose 100ppm to one 2000 gallon tank with Oxygen Scavenger.
15:05	Begin test run of chemical injection pump for the XC 102.
15:21	2550 strokes to pump 5 gallons = 0.00188 gal/stroke. Injection rate to be determined once flooding rate is established to achieve 600ppm of Biocide.
16:52	Begin filling the 50bbl tanks.
17:35	The first tank is full. The second and third tanks are half full.
17:36	Begin purging the hoses.
18:30	Complete function test of equipment. Waiting for instruction to begin flooding operations.

TITLE:	DAILY SITE REPORT			

Project Name:	Helix Noble Raton South		
Project No.:	PS-14550	**Operation:**	Flooding/Hydrostatic Testing

Date & Time	Operational Details & Remarks
08 Aug, 2011	
01:00	Informed of imminent start up of flooding operation
01:20	Speak with the platform and inform them of start up on the West flowline.
01:45	Filling tanks with filtered seawater and OSW490 chemical at 110ppm. Rig up hose to the flowline.
02:00	Conduct JSA with the affected personnel.
02:50	Begin flooding the West flow line with filtered chemically treated seawater.
06:15	Shut down to repair a leak on the hose.
06:16	Continue pumping.
7:40	Note extreme fluxes in flow rate according to flow meter.
7:55	Install diaphragm pump in line with tanks to boost flow.
08:40	Informed that platform is receiving water. Shut down pumps. Final flow meter reading 64,740 total gallons. Mechanical failure on the meter caused last part of flood to register incorrectly. Tanks indicate approximately 69,500 gallons injected into the flowline.
09:10	Restart pumps to ensure line is topped off.
9:11	Shut down pumps and depressurize to tanks.
09:45	Discharge hose is disconnected from the flowline.
09:52	Begin circulating the tanks with XC102 to neutralize any remaining OSW490.
09:56	All stop on number 1 tank.
09:58	Begin circulating on tank number 2.
10:05	All stop on number 2 tank.
10:08	Begin circulating on the number 3 tank.
10:15	All stop on number 3.
10:40	Begin rigging down the equipment spread.
12:40	All Weatherford crew off deck. Helix crew will let us know when the crane is available for use to complete rig down.

Project Name:	Helix Noble Raton South		
Project No.:	PS-14550	Operation:	Mobilize hydrotest spread

Date & Time	Operational Details & Remarks
11 August, 2011	
00:01 am	Hydrotest pumps and flange arrives at the dock. Load the equipment onto the MV Aegena for transit in the early morning.
06:00 am	Leaving the dock, headed out to the Chevron VK 900 platform.
16:00 pm	Arrive at the Chevron VK 900 platform. After we are transferred to the platform and have gone through the orientation, we are told that the crane cannot offload our equipment due to the fact their weight indicator is malfunctioning.
19:15 pm	The crane's weight indicator has been repaired. We begin offloading our equipment.
20:30 pm	All equipment is off loaded from the boat and placed where needed on the platform. We begin rigging up what we can.
22:00 pm	We have run out some hose's. We have moved most of the testing equipment down to the cellar deck. We are shutting down for the night.

Project Name:	Helix Noble Raton South		
Project No.:	PS-14550	**Operation:**	Rig up test spread.

Date & Time	Operational Details & Remarks
12 August, 2011	
06:00 am	After platform safety meeting, continue with the rig up of the Hydrotesting spread.
11:30 am	The flanges have been installed and torqued by the Helix crew. The hose's and manifolds have been set up and in place for function testing after lunch.
12:45 pm	Begin pressurizing the hydrotest spread to check for leaks.
13:15 pm	After a few attempts at pressuring up, we believe that the pump is air locked. Kurt and Michael shut down to come back on for night shift.
13:30 pm	Diagnosing the issues with the two PD pumps.
16:00 pm	After testing both of the PD pumps, and completing the leak test of the hydrotest spread, everything is working as it should. Now waiting on the go ahead from Helix to be given.

Weatherford	PIPELINE & SPECIALTY SERVICES FORM			
FORM NUMBER: 5-4-GL-GL-PSS-00006	REV: 05	PAGE: 1 of 1	ORIGINAL ISSUE DATE: 02/24/2004	REVISION DATE: 04/02/2007
TITLE:	DAILY SITE REPORT			

Project Name:	Helix Noble Raton South		
Project No.:	PS-14550	**Operation:**	Hydrotesting.

Date & Time	Operational Details & Remarks
13 August, 2011	
00:30 am	The Helix Express calls and informs us that the jumper is installed and that they will be performing the back seal tests very shortly. They should be ready for us to begin in about an hour.
02:30 am	The Helix Express calls and they are ready for us to begin pressuring up the flowline.
03:00 am	Begin pressurizing the flowline.
03:56 am	All stop on the pumping. We have reached 525 psig, thus completing the air inclusion of the flowline.
04:21 am	Resume pumping.
07:17 am	All stop on the pumping. We have reached 3,610 psig, which is our 35% hold point.
07:33 am	Resume pumping.
09:00 am	All stop on the pumping. We have reached 5,171 psig, which is our 50% hold period.
09:17 am	Resume pumping.
11:11 am	All stop. Found a small leak on the test manifold. Isolate to fix and replace the check valve.
11:32 am	Resume pumping.
12:41 pm	All stop on the pumping. We have reached 8,256 psig, which is our 80% hold point.
12:58 pm	Resume pumping.
14:31 pm	All stop on pumping. We are at 9,800 psig, which is our 95% hold period.
14:52 pm	Resume pumping.
15:43 pm	All stop on the pumping. We have reached test pressure, 10,502 psig. Total gallons that were pumped in were 5,493 gallons.
15:47 pm	Bleed down the top side hose from the pump to zero psig.
16:00 pm	Begin the hold for the test. Shortly after the beginning of the test hold period, it was noticed that the pressure recorder circular chart was approximately 250 psig higher than the Keller Gauge. It was determined by Mike Pena to make a notation of the deviation, on the chart after the test is complete.
21:00 pm	Pressure is still holding good.

Project Name:	Helix Noble Raton South		
Project No.:	PS-14550	**Operation:**	Hydrotesting and Demob.

Date & Time	Operational Details & Remarks
14 August, 2011	
00:30 am	**Hydrotest is complete. Mike Pena has approved the hydrotest.**
00:45 am	**After taking two samples of the discharge water, we begin bleeding down the flowline.**
05:30 am	**The line is bled down to 0psig. Begin rigging down the last of the equipment that is tied into the read back line. The Helix crew is downstairs and they are removing our flanges and installing the blind flanges on the riser tops.**
07:30 am	**Everything is rigged down and loaded up in the conex. Finalize getting all paperwork signed off on by both Helix representative and the Noble Energy representative. Weatherford P&SS crew is ready to load the vessel and head into the Intermoor dock in Fourchon, LA.**

CERTIFICATE OF CALIBRATION

Tech Cal Temp Recorder , S/N#: 00928

150.00 °F Capacity

Issued To:

Weatherford

Houston, Texas

This instrument has been tested and calibrated in accordance with Technology & Calibration's procedure, WI-8.19, Latest Revision with temperature measuring instruments certified to N.I.S.T. traceable standards. This calibration is in conformance with Technology & Calibration's Quality Assurance Program, ANSI/NCSL Z540.1 and ISO 10012-1. Environmental conditions during calibration are 72 degrees F +/- 4 degrees F and less than 65% relative humidity. The collective uncertainty of the measurement standard does not exceed 25% of the acceptable tolerance for each characteristic of the measuring and test equipment being certified.

NOTES

1) PIPELINE COORDINATES ARE THE POSITIONS OF THE R.O.V. (REMOTELY OPERATED VEHICLE) LOCATED AT THE POINTS USING BOTH VERIPOS LD2 ULTRA DGPS RECEIVING SPOTBEAM CORRECTIONS, VERIPOS ULTRA DGPS RECEIVING INMARSAT CORRECTIONS, SONARDYNE FUSION LBL (LONG BASELINE) ACOUSTIC POSITIONING, KONGSBERG HIPAP USBL(ULTRA SHORT BASELINE) ACOUSTIC POSITIONING AND RDI WORKHORSE DVL POSITIONING.
2) SURVEYED COORDINATES TRANSFORMED FROM NAD83 (GPS DATUM) NADCON VERSION 2.1.
3) THIS DRAWING IS NOT FOR NAVIGATION. PIPELINES AND FEATURES IN THE IMMEDIATE VICINITY ARE OBTAINED FROM BOEMRE (BUREAU OF OCEAN ENERGY MANAGEMENT, REGULATION AND ENFORCEMENT) DATABASE AND CLIENT PROVIDED DATA.
4) AS-BUILT SURVEY DATE: AUGUST 1ST THROUGH AUGUST 8TH, 2011.
5) CLIENT DRAWING REFERENCE: 16172-BASEMAP.DWG AND 24105013ENG.DWG.

NOTES

1) PIPELINE COORDINATES ARE THE POSITIONS OF THE R.O.V. (REMOTELY OPERATED VEHICLE) LOCATED AT THE POINTS USING BOTH VERIPOS LD2 ULTRA DGPS RECEIVING SPOTBEAM CORRECTIONS, VERIPOS ULTRA DGPS RECEIVING INMARSAT CORRECTIONS, SONARDYNE FUSION LBL (LONG BASELINE) ACOUSTIC POSITIONING, KONGSBERG HIPAP USBL(ULTRA SHORT BASELINE) ACOUSTIC POSITIONING AND RDI WORKHORSE DVL POSITIONING.
2) SURVEYED COORDINATES TRANSFORMED FROM NAD83 (GPS DATUM) NADCON VERSION 2.1.
3) THIS DRAWING IS NOT FOR NAVIGATION. PIPELINES AND FEATURES IN THE IMMEDIATE VICINITY ARE OBTAINED FROM BOEMRE (BUREAU OF OCEAN ENERGY MANAGEMENT, REGULATION AND ENFORCEMENT) DATABASE AND CLIENT PROVIDED DATA.
4) AS-BUILT SURVEY DATE: AUGUST 1ST THROUGH AUGUST 8TH, 2011.
5) CLIENT DRAWING REFERENCE: 16172-BASEMAP.DWG AND 24105013ENG.DWG.
