This well has been drilled to 10,606' with 16" casing at 708' and 10 1/4" casing at 3016'. No producible sands were found below 3016'. This well has been plugged by setting a cement retainer at 2960' and testing it with 15,000#. A 106 sx cement plug was pumped out below the retainer and 25 sx were left on top. A 70 sx cement plug was set from 185' to 315'. The 10 1/4" casing was cut off 26' RML, the 16" at 21' RML, and the 36" at 16' RML. This plugging was discussed with Joe Henne on 1-19-89.
